The Wibutler concept

Wibutler is a manufacturer independent smart home solution to simplify people's everyday lives. The solution combines products of various manufacturers and needs only a single app for users to control, combine and automate all products. Using time and automation rules defined especially for this application, wibutler can assume tasks and act according to its owner's wishes.

wibutler pro

The core of the solution is the pro Smart Home control unit wibutler. Thanks to multiple wireless standards (EnOcean, ZWave, ZigBee, WLAN and Bluetooth), it is extremely compatible and is capable of networking products irrespective of the manufacturer. The Smart Home control unit translates wireless standards as required and allows the networking of products of different standards, manufacturers and industries. The wibutler pro is especially safe when used in offline mode. No connection to the Internet is then required.

wibutler app Eltako edition

It takes only a few clicks to network, automate and control smart products using the wibutler app Eltako edition. The entire house is networked and controlled by a single app. This is how it works:

- Automation rules: The wibutler organises devices to work in teams. Devices react by means of if/then rules to movements or actions such as the opening or closing of windows, doors or drawers.
- Time control: wibutler uses time rules to learn repetitive tasks which must be executed at particular times.
- Remote control: using wibutler via your smartphone or tablet when you're away from home to check the state of devices and appliances at home and change them to the state you want.
- Consumption logs: wibutler measures consumption and displays where are the greatest saving potential.
- Profiles: defined rules are assigned to profiles (e.g. 'Home Day/Night', 'Away' and 'Holiday'). With one click of a profile pushbutton you can change the entire house to the mode you require (e.g. 'Away': All OFF, alarm system and presence simulations ON).
