## Installation

### Filter placement

Lift the filter with appropriate crane using lifting eye bolts – smaller types may be lifted manually by two persons (no lifting eye bolt applicable).

### Wiring and connection

The filter rating has to be compatible with the inverter to which it is to be connected. All inverter manufacturer installation and safety instructions must be fulfilled. The typical block schematic is shown for a motor load but the load can be also multiple motors or a transformer. Inverter and load cable selection/placement should be in accordance with all local electrical standards and regulations. Filters with separate capacitor bank must be connected as follows:

### Required settings

Ensure the drive's switching frequency is set to the required minimum switching frequency (see filter selection table). Higher frequencies are allowed. The mode of operation must be "scalar" (V/Hz). Check the inverter manual whether special settings are necessary. In any doubt contact the inverter manufacturer.

**CAUTION:** If the inverter settings are not in accordance the filter may be damaged.

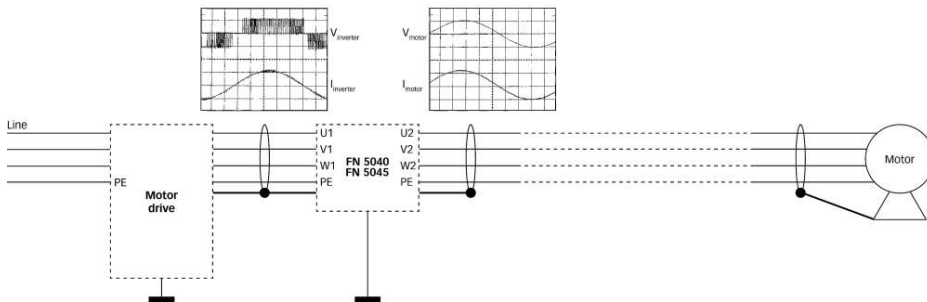

Never attempt to handle the filter with a forklift!

In order to ensure sufficient air flow, keep a distance of 150 mm above and below the filter to walls or other components. A 20 mm distance on either side is recommended.
