## WORKING PRINCIPLE

In presence of metal  $I \leq 1 \text{ mA @ } 8.2 \text{ V}$

In absence of metal  $I \geq 3 \text{ mA @ } 8.2 \text{ V}$

The NAMUR sensors are electronic devices whose absorbed current varies in the presence of a metallic object. The difference between these sensors and traditional sensors is the absence of amplifier trigger stages.

## ADJUSTABLE SENSITIVITY SIP 40

NOTE: In the SIP 40 sensor the oscillator is contained in a module which clips into the body whose surface can then be sensitive on five different positions. The surface chosen can be identified by applying the circular adhesive label.
