# 1. Safety

# **1.1 Important Safety Instructions**

This UPS contains LETHAL VOLTAGES. All repairs and service must be performed by AUTHORIZED SERVICE PERSONNEL ONLY. There are NO USER SERVICEABLE PARTS inside the UPS.

# WARNING:

- The UPS designed for commercial and industrial purpose, it is forbidden to apply for any life sustainment and support.
- The UPS system contains its own energy source. The output terminals may carry live voltage even when UPS is disconnected to an AC source.
- To reduce the risk of fire or electrical shock, UPS installation has to be in a controlled room where temperature and humidity are monitored. Ambient temperature must not exceed 40°C. The system is only for indoor use.
- Ensure all power is disconnected before installation or service.
- Service and maintenance should be performed by qualified personnel only.

#### Before working on this circuit

- Isolate Uninterruptible Power System (UPS)

- Then check for Hazardous Voltage between

all terminals including the protective earth.

The isolation device must be able to carry the UPS input current.

# 1.2 EMC

# WARNING:

This is a product for commercial and industrial application in the second environment - installation restrictions or additional measures may be needed to prevent disturbances.

# 1.3 Installation information

### WARNING:

- Installation must be performed by qualified personnel only.
- The cabinets must be installed on a level floor suitable for computer or electronic equipment.
- The UPS cabinet is heavy. If unloading instructions are not closely followed, cabinet may cause serious injury.
- Do not tilt the cabinets more than 10 degree.
- Before applying electrical power to the UPS, make sure the Ground conductor is properly installed.
- Installation and Wiring must be performed in accordance with the local electrical laws and regulations.
- The disconnection device should be chosen based on the input current and should break line and neutral conductors four poles for three phases.

# 1.4 Maintenance

### WARNING:

- Only qualified service personnel should perform the battery installation.
  - The following PRECAUTIONS should be observed
    - (1.) Remove watches, rings, or other metal objects.
    - (2.) Use tools with insulated handles.
    - (3.) Wear rubber gloves and boots.
    - (4.) Do not lay tools or metal parts on top of batteries or battery cabinets.
    - (5.) Disconnect the charging source prior to connecting or disconnecting terminal.
    - (6.) Check if the battery is inadvertently grounded. If it is, remove the source of grounding. Contacting with any part of the ground might result in electrical shock. The likelihood of such shock can be prevented if such grounds are removed during installation and maintenance.
- UPS is designed to supply power even when disconnected from the utility power. After disconnect the utility and DC power, authorized service personnel should attempt internal access to the UPS.
- Do not disconnect the batteries while the UPS is in Battery mode.
- Disconnect the charging source prior to connecting or disconnecting terminals.
- Batteries can result in a risk of electrical shock or burn from high short circuit current.
- When replacing batteries, use the same number of sealed, lead-acid batteries.
- Do not open or mutilate the battery. Release electrolyte is harmful to the skin and eyes, and may be toxic.

# 1.5 Recycling the used battery

### WARNING:

- Do not dispose of the battery in a fire. Battery may explode. Proper disposal of battery is required. Refer to your local codes for disposal requirements.
- Do not open or mutilate the battery. Released electrolyte is harmful to the skin and eyes. It may be toxic.
- Do not discard the UPS or the UPS batteries in the trash. This product contains sealed, lead-acid batteries and must be disposed properly. For more information, contact your local recycling/reuse or hazardous waste center.
- Do not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

# 2. Installation

# 2.1 Initial Inspection

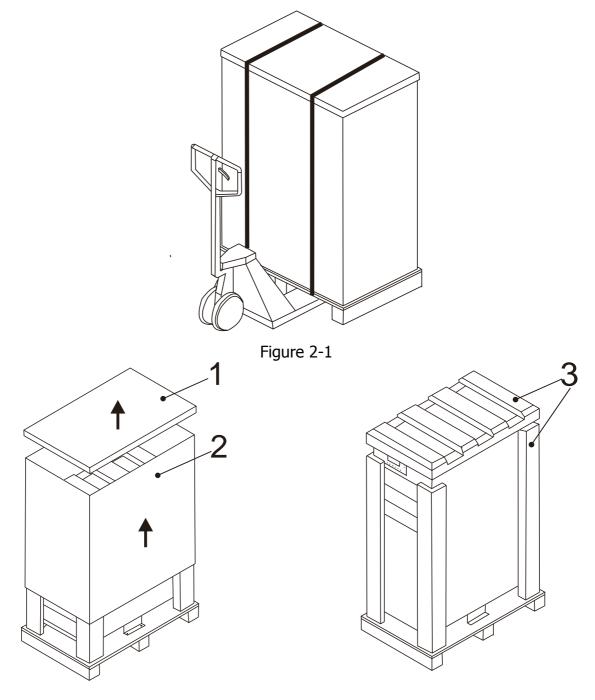

- 1. Visually examine if there is any damage inside and outside of packages in the process of the transportation. If any damage, report it to the carrier immediately.
- 2. Verify the product label and confirm the consistency of the equipment.
- 3. If the equipment needs to be returned, carefully repack the equipment by using the original packing material that came with.

# **2.2 Installation Environment**

- 1. The UPS is designed for indoor use only and should be located in a clean environment with adequate ventilation to keep the environmental parameters within the required specification.
- 2. Make sure that transportation routes (e.g. corridor, door gate, elevator, etc.) and installation area can accommodate and bear the weight of the UPS, the external battery cabinet and handling equipment.
- 3. The UPS uses forced convection cooling by internal fans. Cooling air enters the module through ventilation grills located at the front of the cabinet and exhausted through grills located in the rear part of the cabinet. Please do not block the ventilation holes.
- 4. Ensure that the installation area is spacious for maintenance and ventilation.
- 5. Keep the temperature of installation area around 30°C and humidity within 90%. The highest operating altitude is 1000 meters above sea level.
- 6. If necessary, install a system of room extractor fans to avoid formation of room temperature. Air filters are necessary if the UPS is operated in a dusty environment.
- 7. It is recommended that you parallel the external battery cabinets to the UPS. The following instructions of clearances are suggested:
  - Keep a clearance of 100cm from the top of the UPS for maintenance, wiring and ventilation.
  - Keep a clearance of 100cm from the back of the UPS and the external battery cabinets for ventilation.
  - Keep a clearance of 150cm from the front of the UPS and the external battery cabinets for maintenance and ventilation.
- 8. For safety concerns, we suggest that you shall:
  - Equip with CO2 or dry powder fire extinguishers near the installation area.
    - Install the UPS in an area where the walls, floors and ceilings were constructed by fireproof materials.
- 9. Do not allow unauthorized personnel to enter the installation area. Assign specific personnel to keep the UPS key.

# 2.3 Unpacking

- 1. Use a forklift to move the product to installed area. Refer to Figure 2-1. Please make sure the bearing capacity of forklift is sufficient.
- 2. Please follow the order in Figure 2-2 to remove carton and foams.

- Remove 2 fixing cabinet plates and loosen leveling feet by rotating them counterclockwise. 3. Then, move the cabinet from the pallet. Refer to Figure 2-3. To fix the cabinet in position, simply rotate leveling feet clockwise. Refer to Figure 2-4.
- 4.

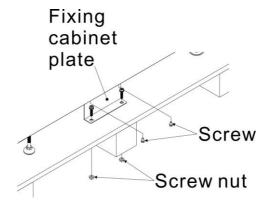

Figure 2-3

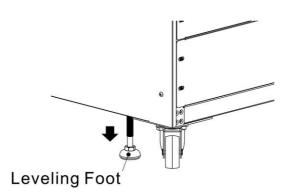

Figure 2-4

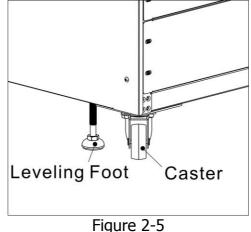

# 2.4 Moving the Cabinet

# \land Warning

The UPS is fixed on the pallet with 2 fixing cabinet plates. When removing it, pay attention to the movement of the casters to avoid accidents.

The cabinet can be pushed forward or backward only. Pushing it sideward is not allowed. When pushing the cabinet, pay attention not to overturn it as the gravity center is high.

- 1. If you need to move the UPS over a long distance, please use appropriate equipment like a forklift. Do not use the UPS casters to move over a long distance.
- 2. After the UPS has been removed from the pallet to ground, we suggest that at least three people move the UPS to the installation area. One person holds a lateral side of the UPS with hands, another holds the other lateral side of the UPS with hands, and the other person pushes the UPS either from the front side or from the back side to the installation area and avoid tipping the UPS.
- 3. The casters are designed to move on level ground. Do not move the UPS on an uneven surface. This might cause damage to the casters. Toppling the UPS could also damage the unit.
- 4. Ensure that the weight of UPS is within the designated bearing capacity of any handling equipment.
- 5. At the bottom of the UPS, the two casters help you to move the UPS to a designated area. Before you move the UPS, please turn the two leveling feet counterclockwise to raise them off the ground. This protects the leveling feet from damage when moving the UPS. Refer to Figure 2-5.

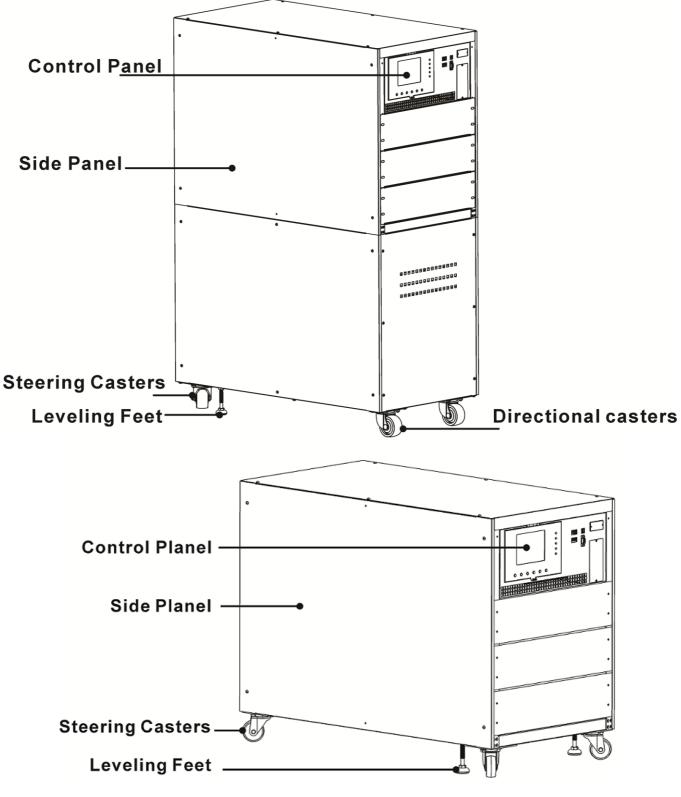

**2.5 Types of UPS Cabinet** There are two types of UPS cabinets. One is the power cabinet only and the other is the power cabinet stacked on the battery cabinet.

	With I	Battery	Without	t Battery
Photo Cabinet Height				
	30U	30U	15U	15U
Switch Unit	1	1	1	1
Max. Power Module	3(30K)	3(20K)	3(30K)	3(20К)

# **2.6 Exterior**

In the front of the UPS, there are control interface (LCD Panel), communication slots, communication ports and 3 Power Module slots.

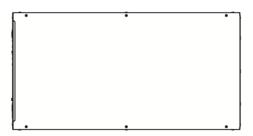

All wiring terminal blocks are allocated in the back of cabinet. The side panels are locked by screws. The casters at the bottom of the UPS cabinet can be used to move over for short distances. There are two leveling feet to fix and stabilize the UPS cabinet on the ground.

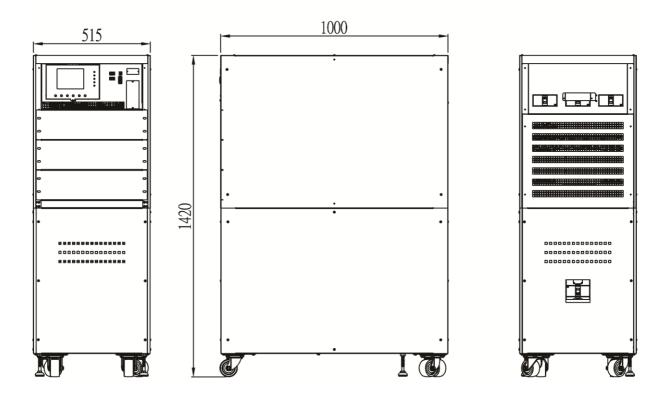

### 2.6.1 Mechanical Data

Dimensions					
UPS cabinet Width Depth Height					
30U	515 mm	1000 mm	1420 mm		
15U 515 mm		1000 mm	763 mm		

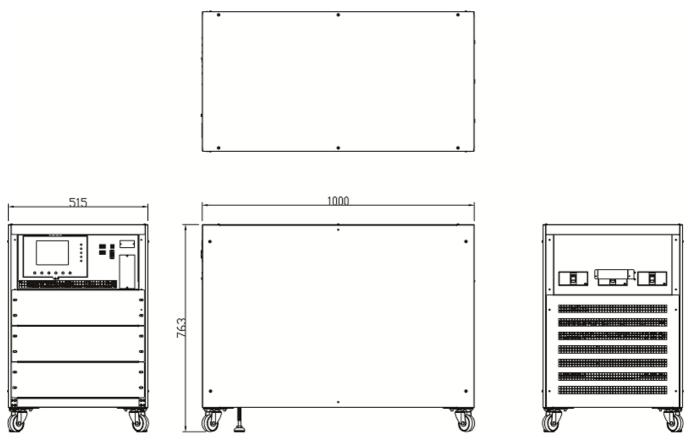

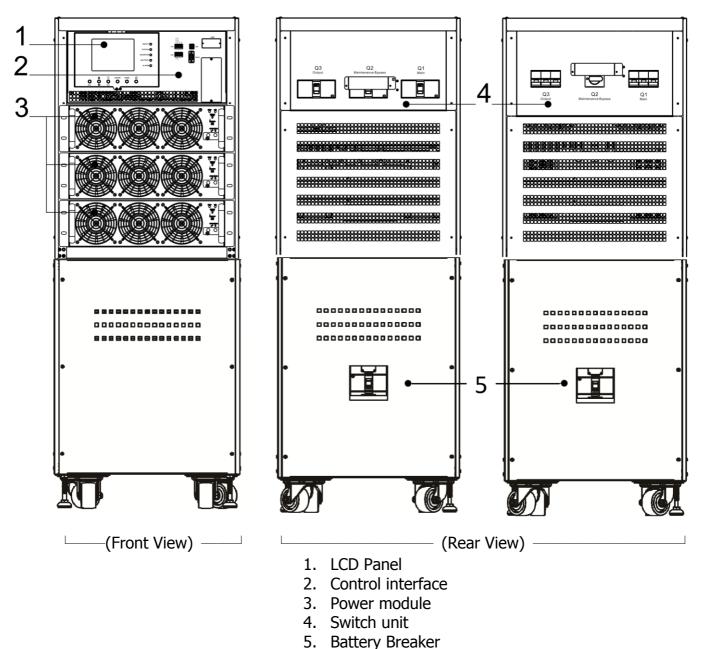

Figure 2-7 Dimensions

#### 2.6.2 Front / Rear View

Front View: You will see the Power Module and control interface (LCD Panel).

Rear View: You will see the Switch unit (Main/Maintenance Bypass/Output) and battery breaker which is installed on the battery cabinet.

With Battery Cabinet Type

Figure 2-8: Front and Rear View

### 2.7 Internal Mechanisms 2.7.1 Breakers

At the rear of the cabinet, you can see Main/Maintenance Bypass/Output breakers. If the cabinet type is with the battery, there is a battery breaker as well. Refer to Figure 2-9.

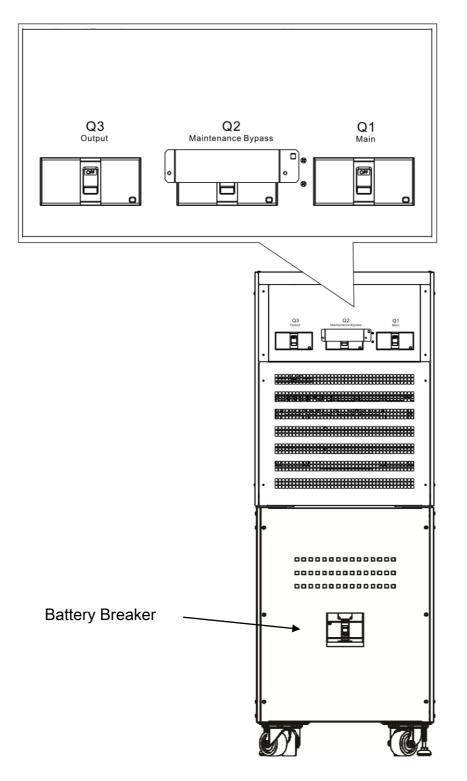

Figure 2-9: Rear View/Output, Maintenance Bypass, and Input Breakers

#### 2.7.2 Wiring Terminal Blocks

Open the UPS's back doors and you will see the wiring terminal block. For UPS cabinet wiring, please refer to Figure 2-10.

No.	Item	Function	Description
1	Output Block	Connects the critical loads	Includes R, S, T and Neutral terminals.
2	Bypass Input Block	Connects bypass AC source	Includes R, S, T and Neutral terminals.
3	Main Input Block	Connects main AC source	Includes R, S, T and Neutral terminals.
4	For UPS Grounding	For UPS grounding	Includes one grounding terminal.
5	Battery Input Block	Connects an external battery cabinet	Includes Positive (+), Negative (-) and Neutral (N) terminals.

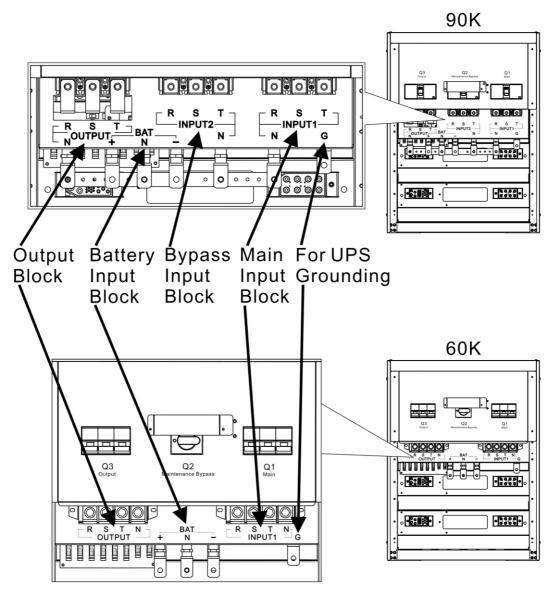

Figure 2-10 Rear View & Wiring Terminal Block

# 2.8 Control Panel

#### 2.8.1 LCD Display

Through the graphic LCD display, the user can easily understand the operation mode of UPS. In addition, the measurement, parameters, versions of firmware and warnings can be browsed in the friendly interface. For detailed information, please refer to Chapter 4.

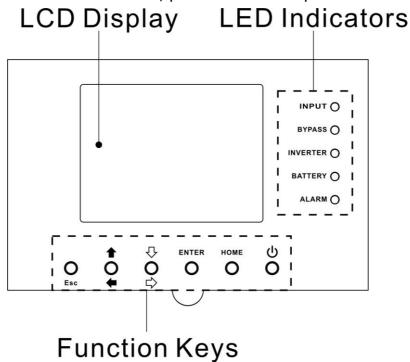

Figure 2-11 Control Panel

#### 2.8.2 LED Indicators

LED	Color	Status	Definition
		On	Input source is normal.
INPUT	Green	Flashing	Input source is abnormal.
		Off	No input source
		On	Load on Bypass.
BYPASS	Yellow	Flashing	Input source is abnormal.
		Off	Bypass not operating.
INVERTER	Green	On	Load on inverters.
INVLNILN		Off	Inverters not operating.
	Red	On	Load on Battery.
BATTERY		Flashing	Low battery
		Off	Battery converter is normal and battery is charging.
		On	UPS fault.
ALARM	Red	Flashing	UPS alarm.
		Off	Normal.

# 2.8.3 Function Keys

Control Key	Description		
Esc	<ul> <li>When it is in Main screen, you can enter menu by pressing ESC key.</li> <li>Return to previous screen, when screen is not in Main screen.</li> <li>Return to previous value in the same row, so you can change it. For example, when changing 4-digit password, press "Esc" to allow cursor back to previous digit.</li> </ul>		
<b>↑</b> (Up) <b>←</b> (Left)	Key for menu page navigation or digit modification.		
↓ (Down) 🖒 (Right)	Key for menu page navigation or digit modification.		
Enter	Confirmation of commands, or cursor displacement.		
Home	Return to Main screen.		
り Power On/Off	Turn on UPS or turn off UPS.		

# **2.9 Introduction of Modules**

The design of Power Module make maintenance and replacement quick and easy. The modular and hot-swappable design of Power Module makes it a highly cost-effective solution to meet your power requirement. The number of Power Modules installed in the UPS can be based on the initial needs. Once the power requirement increases, you can easily install more Power Modules without interrupting the operation of the system.

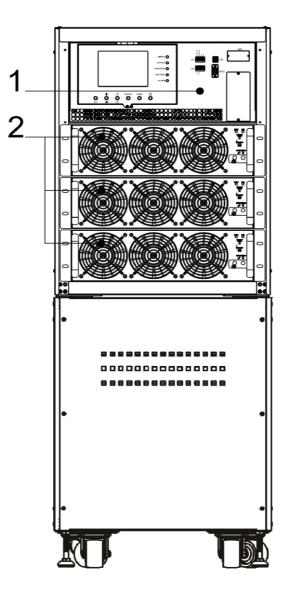

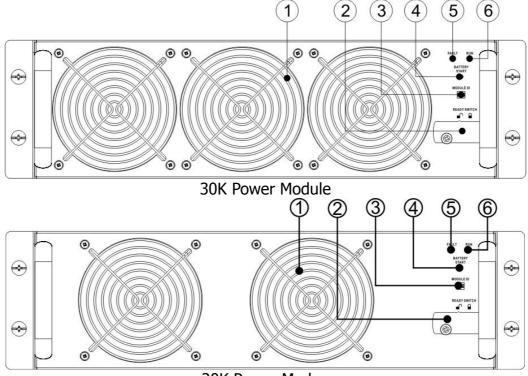

Figure 2-12 Front view of cabinet

#### 2.9.1 Power Module

Each Power Module is shipped with its own package. It has to be installed during the UPS system installation.

The capacity of each Power Module is 30kVA/30kW or 20KVA/20KW. It includes a power factor correction rectifier, a battery charger, an inverter and control circuit.

No.	Item		Description		
1	Fan	The Power Module uses forced convection cooling by these fans. Cooling air enters the module through ventilation grills and exhalation exhausts through grills located at the rear of the module. Please do not block the ventilation area.			
2	Ready Switch	Unlock it before removing the Power Module. Lock it when the Power Module is well installed. Then the Power Module can start to work.			
3	DIP Switches	There are three DIP switches for Power Module address setting. In the same cabinet, each Power Module ID MUST be exclusive. The setting method is shown in <b>Table 2-1</b> .			
4	Battery Start Button	When AC input is no for UPS.	ot existing, use this button to start battery power		
(5)		ON	The Power Module is in fault condition or the Ready Switch is unlocked.		
9	FAULT LED	ON/OFF 0.5 sec	The Power Module IDs conflict.		
		ON/OFF 0.15 sec	The STS is not found.		
	ON RUN LED ON/OFF 0.5 sec ON/OFF 0.15 sec	The Power Module normally works as a slave module.			
6		The Power Module normally works as a master module.			
		ON/OFF 0.15 sec	The CAN Bus communication doesn't work.		

20K Power Modue Figure 2-19 Power Module

Module Address	DIP SWITCH	Module Address	DIP SWITCH	
0		1		
2		3		
4		5		
6		7		
Table 2-1 DIP switch setting and Module Address				

#### **Power Module ID Assignment**

According to the Module Address and the position of SW1 and SW2, the Power Module's ID is assigned. The Module ID is shown in **Table 2-2**.

These two switches, SW1 & SW2 are mounted in the Parallel board which is located at the back of UPS cabinet. Refer to Figure 2-20.

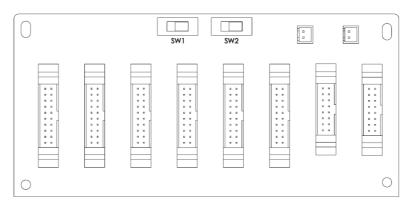

Figure 2-20 Parallel Board

The SW1 and SW2 positions have been well installed before leaving factory. It's not necessary to change it for single UPS system application.

SW1 & SW2	Module Address	Module ID	SW1 & SW2	Module Address	Module ID	
	0	0	-	0	9	
	1	1		1	10	
	2	2		2	11	
	3	3		3	12	
SW1 SW2	4	4	SW1 SW2	4	13	
	5	5		5	14	
	6	6	-	6	15	
	7	7		7	16	
	0	18	-	0	27	
	1	19		1	28	
	2	20		2	29	
	3	21		3	30	
SW1 SW2	4	22	SW1 SW2	4	31

	Ta	ble 2-2 Modul	e ID Assignment			

# 2.10 Power Cable

\land Warning

Please follow the local wiring regulations. Follow environmental conditions and refer to IEC60950-1.

#### 2.10.1 AC input and output maximum current and power cable configuration.

Model	20KVA	40KVA	60KVA
Current (A)	36.8	73.6	110.4
Power cable (mm <sup>2</sup> )	6	16	35
Fixation torque force (lb-in)	20	20	20

Model	30KVA	60KVA	90KVA
Current (A)	55	110	165
Power cable (mm <sup>2</sup> )	10	35	70
Fixation torque force (lb-in)	20	20	20

**Note:** Installer has to consider the max. current and wiring gauge when considering future extension.

#### 2.10.2 DC input maximum current and power cable configuration.

Model	20KVA	40KVA	60KVA
Current (A)	67	134	200
Power cable (mm <sup>2</sup> )	15	50	95
Fixation torque force (lb-in)	20	20	20

Model	30KVA	60KVA	90KVA
Current (A)	100	200	300
Power cable (mm <sup>2</sup> )	25	95	150
Fixation torque force (lb-in)	20	20	20

#### Warning:

1. The standard battery cabinet can contain 120 pcs of 12V 9Ah battery. If the load rating is over 60KVA, only one battery cabinet is not sufficient for the discharging current. At least one more battery cabinet has to be installed in parallel.

# 2.11 Wiring

#### WARNING:

- Before wiring, make sure the AC input and battery power are completely cut off.
- Make sure the breakers, Main Breaker (Q1), Maintenance Breaker (Q2), Output Breaker (Q3) and battery breaker are all in the **OFF** position.

#### 2.11.1 Installation Drawing

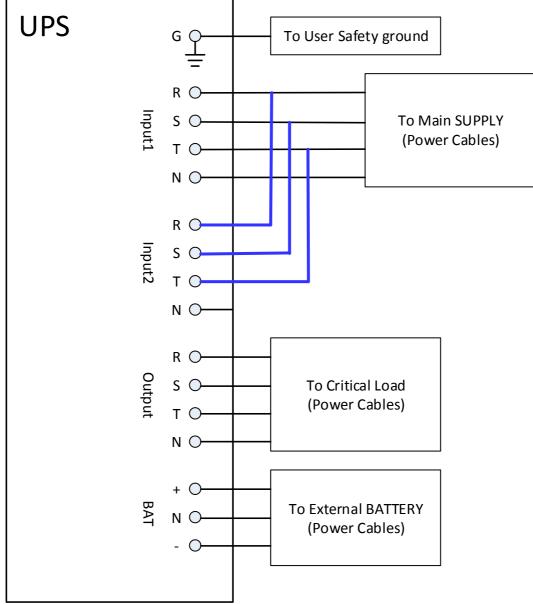

Figure 2-23 UPS Cabinet Wiring

### 2.11.2 AC source connection

This UPS is for **Single input** application, connect Input1 to the AC power source and use 3 short wires to connect Input1 and Input2. (the blue lines as shown in Figure 2-23.)

#### Warning: These three wires are required for Maintenance Bypass power source.

The sequence of three phase, R, S and T must be connected accordingly. The wrong sequence will alarm a warning when the UPS is powered.

The N must be connected firmly. A warning message will be indicated, if the N is not connected well.

#### 2.11.3 External Battery Cabinet Connection

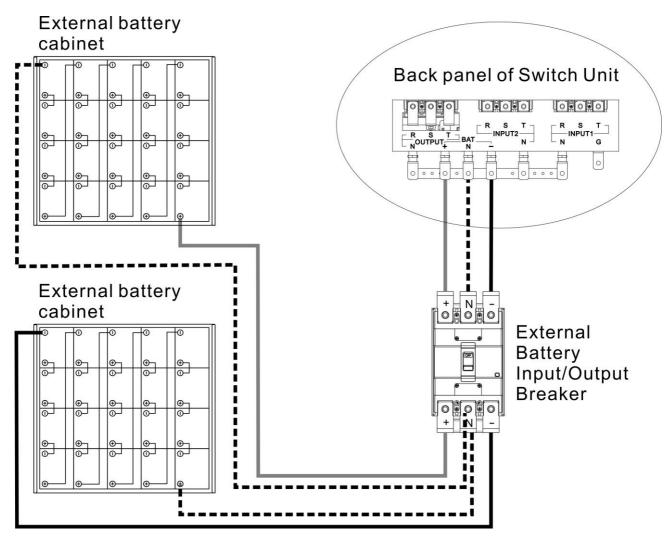

Figure 2-24 External Battery Cabinet Wiring

After the battery is completely installed, be sure to set up nominal battery voltage, battery capacity and maximum charging current in LCD setting. Otherwise, if battery setting is different from actual installation, the UPS will keep warning. Please refer to section 4.2.6.3 and **Table 4-9** for details.

# 2.12 Power Module Installation

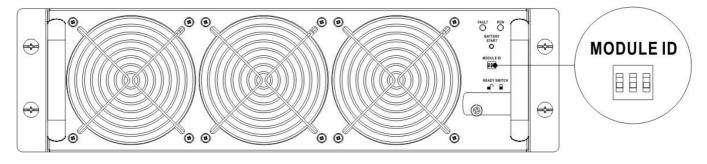

<u> M</u>arning

The weight of Power Module is over 30Kg so at least two persons are required for handling.

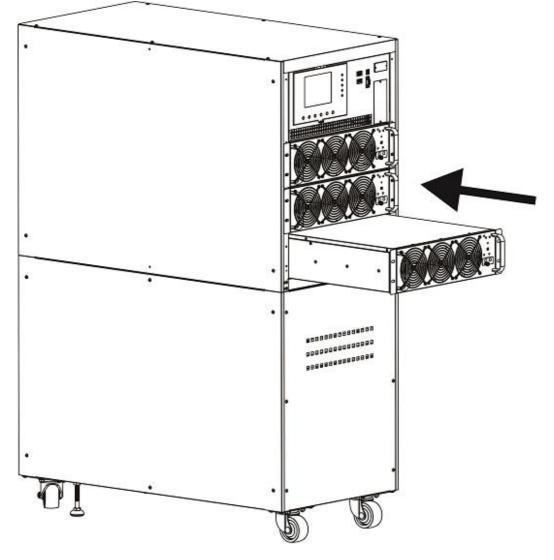

#### 2.12.1 Insert the Power Module

**Warning:** The power Modules installed in the same cabinet must be at the same rating.

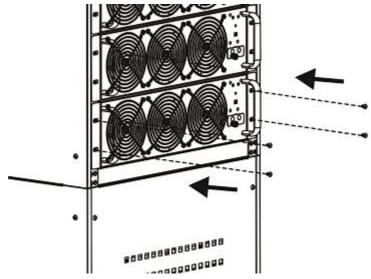

(1.) Adjust the DIP switch positions to set the different Module Address. Refer to Table 2-1.

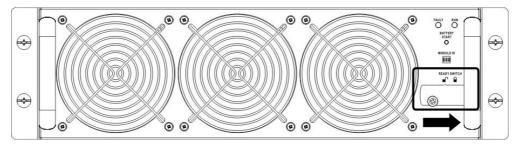

- (2.) Place the ready switch at the front panel of the module to the "" position (i.e., in unready state).
- (3.) Insert the Power Module into an unoccupied slot by two persons.

(4.) Secure the Power Module to the cabinet by fixing the screws at the front panel of the Power Module.

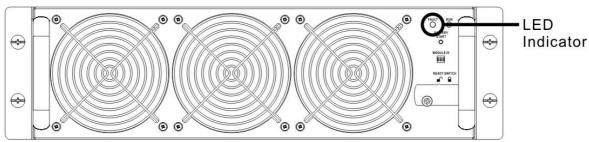

(5.) Move the ready switch to the " $\square$ " position (i.e., in ready state).

#### 2.12.2 Remove the Power Module

# \land Warning

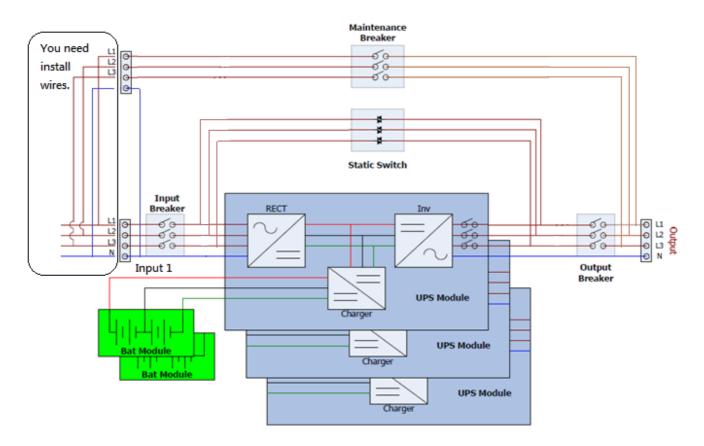

- Before removing any Power Module, make sure the remaining Power Modules can support the critical loads.
- At least one Power Module MUST stay in the UPS cabinet in case the UPS system is operating in Maintenance Bypass Mode.
- (1.) Turn the ready switch to the " $\blacksquare$ " position.
- (2.) The Power Module FAULT LED (RED) indicator is lit to show the Power Module output is off and disconnected from UPS system.

- (3.) Use a screwdriver to remove the four screws from fixing holes.
- (4.) Two people pull out together and remove the Power Module from its slot.

# 3. Operation Mode and UPS Operation

# **3.1 Block diagram of UPS**

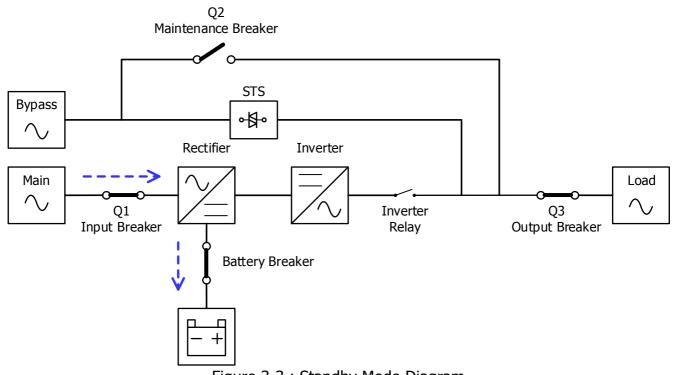

# **3.2 Operation Mode**

This modular UPS is a three-phase, four wire on-line, double-conversion and reverse-transfer UPS that permits operation in the following modes:

- Standby Mode
- Line Mode
- Battery Mode
- Bypass Mode
- ECO Mode
- Shutdown Mode
- Maintenance Bypass Mode (manual bypass)

#### 3.2.1 Standby Mode

Upon connecting to utility input power, the UPS is in Standby mode before UPS is turned on (if BYPASS enable setting is Disabled), and charger function will be active when the battery is present. The load is not powered under this mode.

#### Figure 3-3 : Standby Mode Diagram

#### 3.2.2 Line Mode

In Line Mode, the rectifier derives power from the utility power and supplies DC power to the inverter and the charger charges the battery. The inverter filters the DC power and converts it into pure and stable AC power to the load.

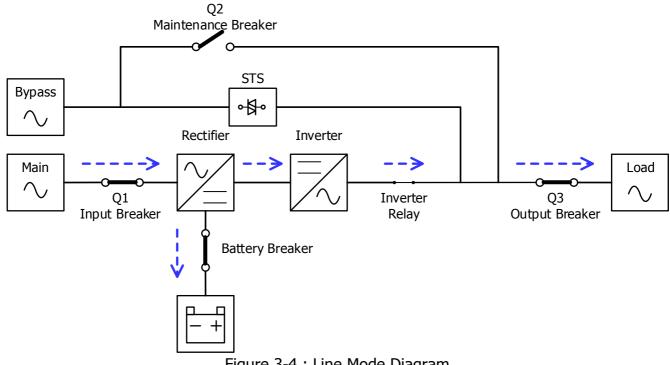

Figure 3-4 : Line Mode Diagram

#### 3.2.3 Battery Mode

The UPS automatically transfers to Battery mode if the utility power fails. There is no interruption in power to the critical load upon failure.

In battery mode, the rectifier derives power from the battery and supplies DC power to the inverter. The inverter filters the DC power and converts it into pure and stable AC power to the load.

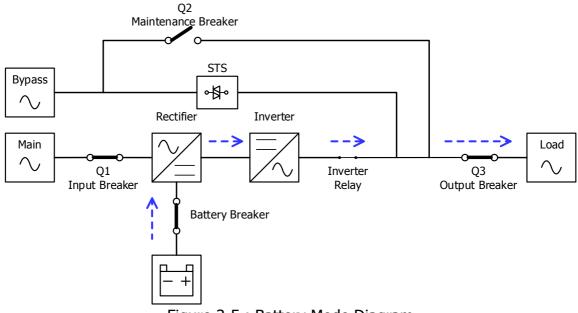

Figure 3-5 : Battery Mode Diagram

#### 3.2.4 Bypass Mode

Upon connecting to utility input power, the UPS is in Bypass mode before UPS is turned on (if BYPASS enable setting is Enabled), and charger function will be active when battery is present.

After UPS has been turned on, if the UPS encounters abnormal situations (over-temperature, overload ..., etc.), the static transfer switch will perform as a transference of the load from the inverter to the bypass source with no interruption. If the transference is caused by a recoverable reason, the UPS will turn back to line mode when abnormal situation is solved.

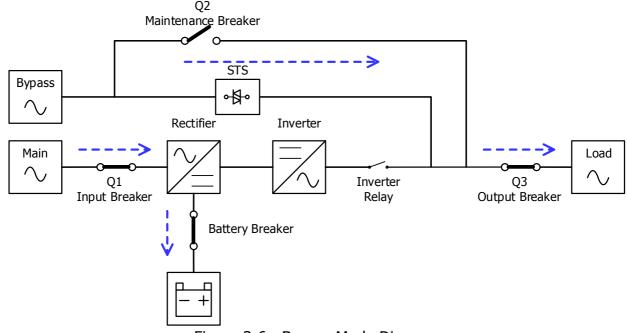

Figure 3-6 : Bypass Mode Diagram

#### 3.2.5 ECO Mode

The ECO Mode is enabled through the LCD setting menu. In ECO mode, the load is powered by bypass when the bypass voltage and frequency are within the acceptable ranges. If the bypass is out of range, the UPS will transfer the power source of load from bypass to inverter. In order to shorten the transfer time, the rectifier and inverter are working when the UPS is in ECO mode.

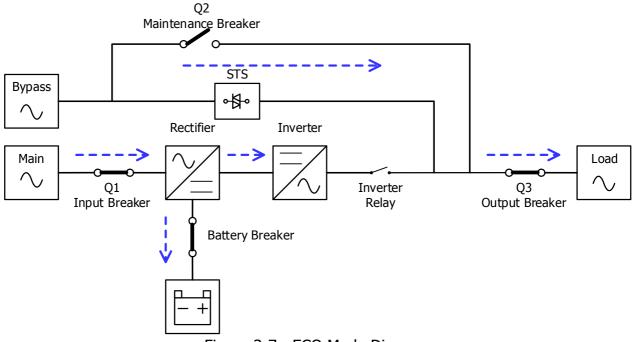

Figure 3-7 : ECO Mode Diagram

#### 3.2.6 Shutdown Mode

When the UPS is in the off state and the utility power source is absent, the UPS will enter into shutdown mode.

Or when the UPS has discharged the battery to the cut-off level, the UPS will enter into shutdown mode as well.

When the UPS enters this mode, it is going to shut off the control power of UPS. The rectifier, charger and inverter are all in off state.

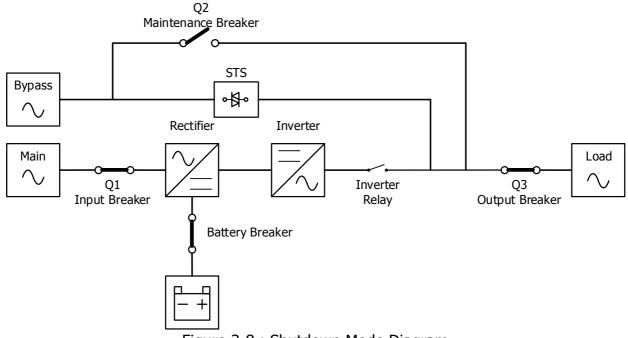

Figure 3-8 : Shutdown Mode Diagram

#### 3.2.7 Maintenance bypass Mode

A manual bypass switch is available to ensure continuity of supply to the critical load when the UPS becomes unavailable e.g. during a maintenance procedure. Before entering the maintenance bypass mode, make sure the bypass power source is normal.

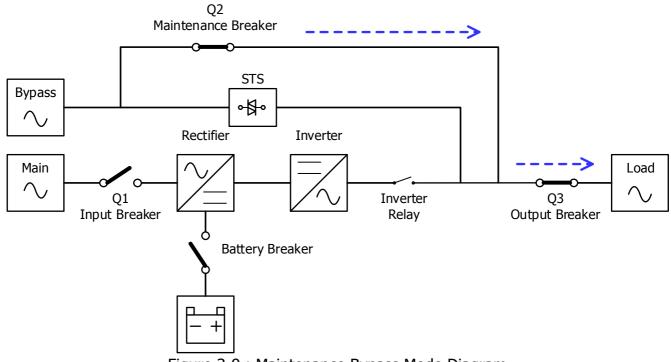

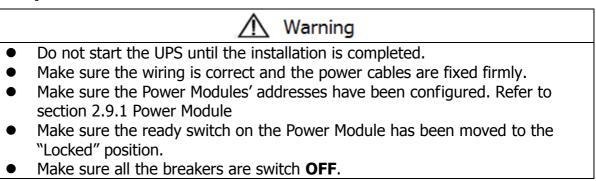

Figure 3-9 : Maintenance Bypass Mode Diagram

# 3.3 UPS Operation

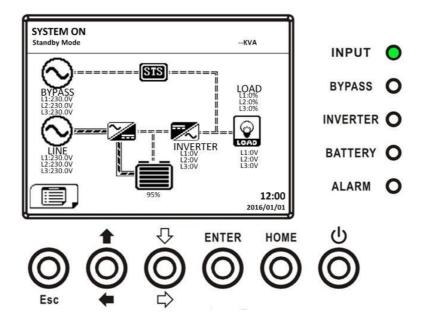

#### 3.3.1 AC Startup

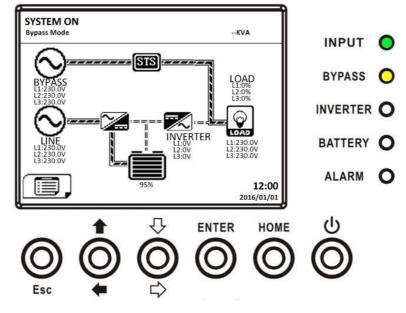

Ensure to follow this procedure when turning on the UPS from a fully powered-down condition.

The operating procedures are as follows:

- **Step 1**: Refer to "Chapter 2 Installation" to connect the power cables and install the Power Modules and the battery required for the UPS system.
- Step 2: Switch ON the battery breaker.
- **Step 3**: Switch ON the external power switch to power the UPS.
- **Step 4**: Switch ON the input breaker (Q1). The UPS will enter into Standby Mode, if the setting of Bypass mode is disabled.

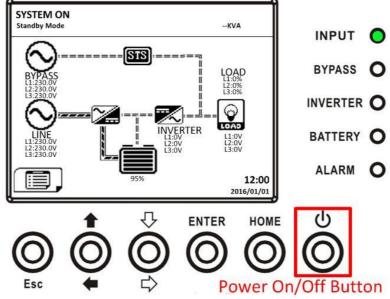

Or the UPS will enter into Bypass Mode, if the setting of Bypass mode is enabled.

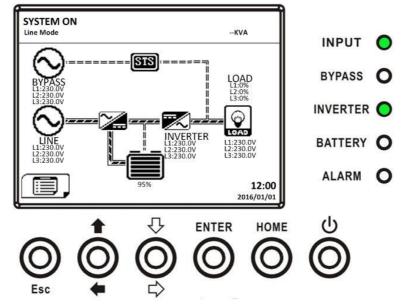

**Step 5**: Make sure there is no warning or fault event happening. If there is , please refer to Chapter 6 Troubleshooting to solve it.

Step 6: Press Power ON/OFF button for two seconds to enter into Line Mode as shown below.

After turned on, UPS will do self-test and start Inveter up. UPS will be transferred to Line mode when all power modules are ready.

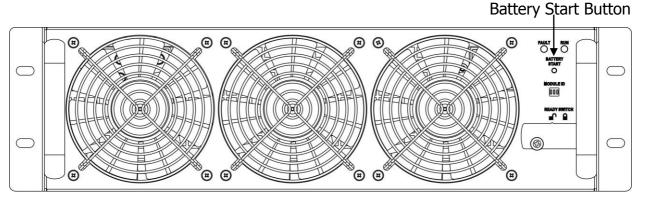

Step 7: Switch ON the output breaker (Q3). AC startup procedure is complete.

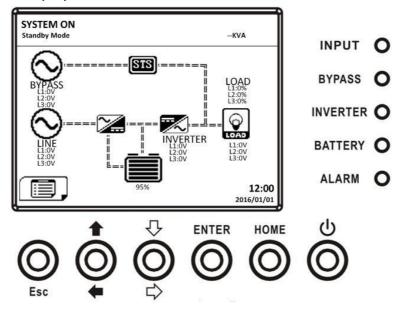

#### 3.3.2 Cold Start Startup

**Step 1**: Switch ON the battery Breaker.

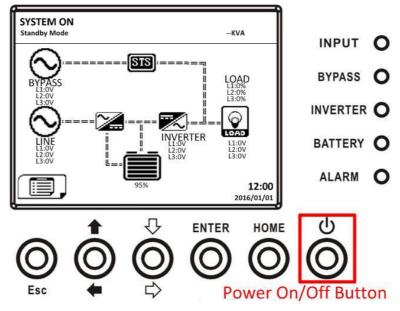

**Step 2**: Press the "Battery Start" button on any one of Power Modules to start up the control power of all Power modules and STS as shown below.

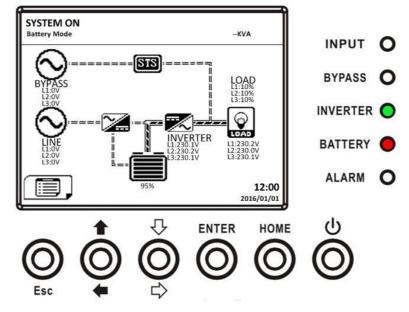

**Step 3**: After pressing the "Battery Start" button, UPS will enter into Standby mode. Refer to the diagram below for LCD display.

**Step 4**: Before UPS enters into shutdown mode, please press "Power On/Off" button for 2 second immediately as shown in the diagram below.

**Step 5:** Then, UPS will enter Battery Mode as shown in the diagram below.

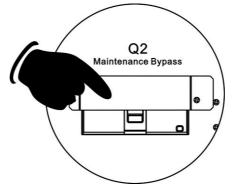

**Step 6:** Switch ON the output breaker (Q3). Cold start startup procedure is complete.

#### 3.3.3 Maintenance Bypass Operation

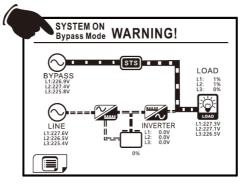

Follow the instruction to transfer to Maintenance Bypass and UPS protection as below.

#### 3.3.3.1 Transfer to maintenance bypass

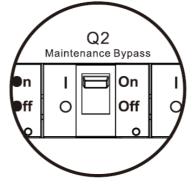

**Step 1**: Remove the mechanical lock plate of Maintenance Bypass Breaker.

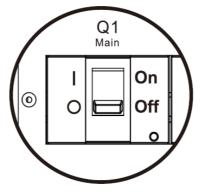

Step 2: Make sure the UPS operates in Bypass mode as shown below.

**Step 3**: Switch ON the Maintenance Bypass Breaker as shown below.

**Step 4**: Switch OFF the Main Breaker (Q1) as shown below.

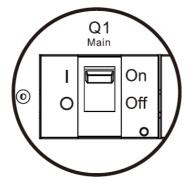

**Step 5**: It is possible to change the PCBA of STS and Power Module.

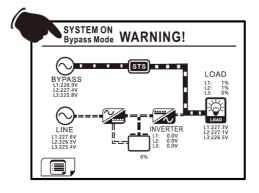

### 3.3.3.2 Transfer to UPS Protection

**Step 1**: Make sure the maintenance is complete. The Power Modules have been installed well.

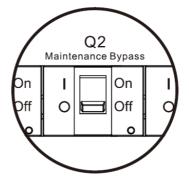

Step 2: Switch ON the Main Breaker (Q1) as shown below.

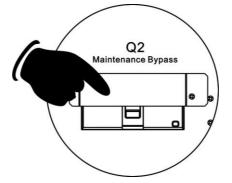

**Step 3**: Please enter LCD SETUP MENU and choose "SYSTEM" to ensure that the "Bypass mode" is enabled. If the "Bypass mode" is disabled, you have to set it enabled. Then, exit the SETUP menu and check if the UPS operates in bypass mode.

**Step 4**: Turn off Maintenance Bypass Breaker as shown below.

Step 5: Lock back the mechanical lock plate as shown below.

#### 3.3.4 Turn off Operation

#### 3.3.4.1 Bypass Mode/ Standby Mode Turn Off Operation

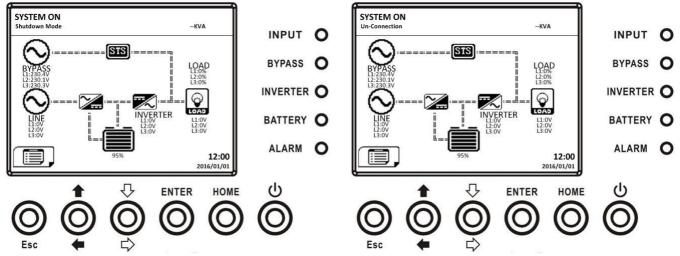

When the UPS neither is turned on nor turned off, the UPS operates in the Standby Mode or Bypass Mode. It depends on the "Bypass Mode" Setting.

The LCD diagrams are shown below.

Bypass Mode Setting is Disabled

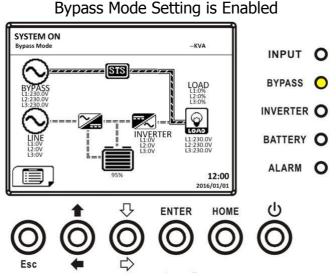

Bypass Mode Setting is Enabled SYSTEM ON Standby Mode SYSTEM ON -KVA -KVA INPUT C INPUT O =STS == STS ≃ BYPASS 0 BYPASS O LOAD OAD INVERTER O INVERTER O 000 ERTER ERTER BATTERY O BATTERY O L1:0V L2:0V L3:0V L1:230.01 L2:230.01 ALARM 0 ALARM O 12:00 12:00 2016/01/01 2016/01/01 ENTER HOME ENTER HOME  $\mathbf{O}$ C (

Step 1: Switch OFF the Main Breaker. The LCD diagrams are shown below. Bypass Mode Setting is Disabled

UPS enters Shutdown Mode.

It is normal the Un-Connection is shown when Power Modules have shut off their control power.

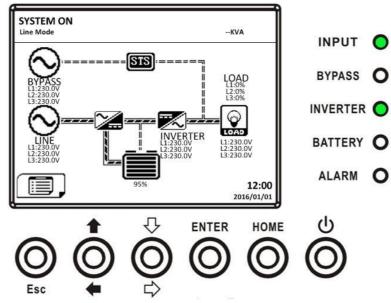

UPS stays in Bypass mode and No AC input is indicated.

**Step 2**: Switch OFF the external power switch to disconnect the AC power to the UPS. Wait until the LCD is OFF.

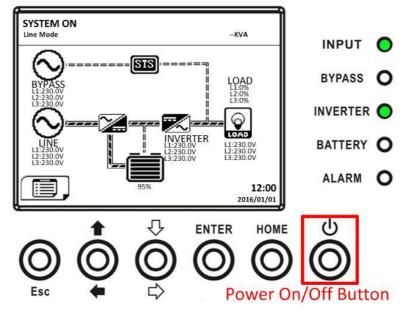

**Step 3**: Switch OFF the battery breaker, if the UPS will disconnect the AC power for a long time.

# 3.3.4.2 Line Mode Turn Off Operation

The LCD diagrams are shown below when the UPS operates in the Line Mode.

Press "Power On/Off" button for 2 second to turn off the UPS. Or use the Menu-Control-System Turn Off to turn off the UPS.

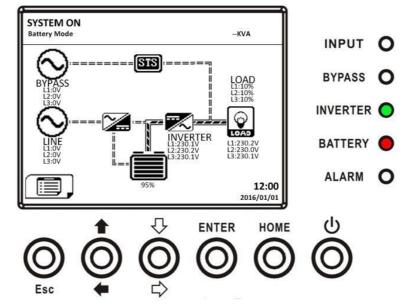

After turned off, the UPS will tranfer to Standby Mode or Bypass Mode. It depends on the "Bypass Mode" Setting.

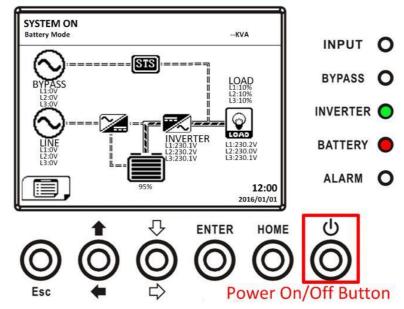

Next, follow the **Bypass Mode/ Standby Mode Turn Off Operation** procedure.

## 3.3.4.3 Battery Mode Turn Off Operation

The LCD diagram is shown below when the UPS operates in the Battery Mode.

Press "Power On/Off" button for 2 second to turn off the UPS. Or use the Menu-Control-System Turn Off to turn off the UPS.

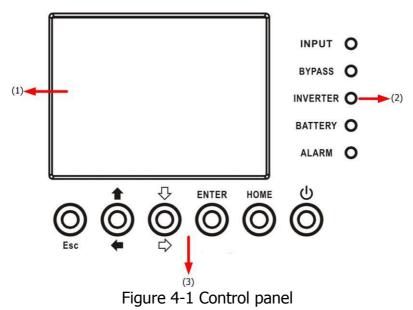

After turned off, the UPS will tranfer to Standby Mode.

Next, follow the Bypass Mode/ Standby Mode Turn Off Operation procedure.

# 4. Control Panel and Display Description

# **4.1 Introduction**

This control panel and display description are located at the front door of the UPS. It is the USER control, monitoring of all measured parameters, UPS and battery status and alarms. The control panel and display description are divided into four functional areas: (1) LCD display, (2) LED indications, (3) Control keys, (4) Audio Alarm, as shown in Figure 4-1.

- (1) LCD display: Graphic display and all measured parameters.
- (2) LED indications. Refer to **Table 4-1**.
- (3) Control keys. Refer to **Table 4-2**.

LED	Color	Status	Definition
		On	Input source is normal.
INPUT	Green	Flashing	Input source is abnormal.
		Off	No input source
		On	Load on Bypass.
BYPASS	Yellow	Flashing	Input source is abnormal.
		Off	Bypass not operating.
INVERTER	Green	On	Load on inverters.
INVLNILN		Off	Inverters not operating.
	Red	On	Load on Battery.
BATTERY		Flashing	Low battery
		Off	Battery converter is normal and battery is charging.
		On	UPS fault.
ALARM	Red	Flashing	UPS alarm.
		Off	Normal.

Table 4-1: LED indications

Table 4-2: Function Keys

Control Key	Description	
Esc	<ul> <li>When screen is in Main screen, it will enter into main menu by pressing ESC key.</li> <li>Return to previous screen, when screen is not in Main screen.</li> <li>Return to previous value in the same row, so you can change it. For example, when changing 4-digit password, press "Esc" to allow cursor back to previous digit.</li> </ul>	
ightarrow (Up) ← (Left) Key for menu page navigation or digit modification.		
↓ (Down) 🛱 (Right)	ght) Key for menu page navigation or digit modification.	
Enter	Confirmation of commands, or cursor displacement.	
Home	Return to Main screen.	
Power On/Off	Turn on UPS or Turn off UPS.	

### Table 4-3: Audible Alarm

Description		
Buzzer sounds two seconds.		
Buzzer sounds every 2 seconds.		
Buzzer sounds every half seconds.		
Buzzer sounds every 1 second.		
Buzzer continuously sounds.		

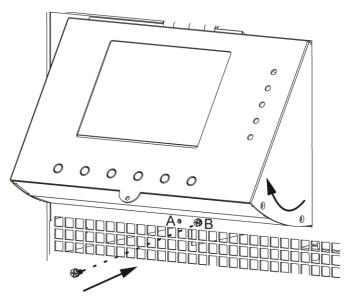

# 4.1.1 Adjust the viewing angle of LCD panel

Following the steps below, you can adjust the viewing angle of LCD panel.

# **Step 1**: Remove the screw (A).

Remove the screw (A)

Step 2: Lift the panel and fix the screw back at (B).

Lift the panel and fix the screw back

# 4.2 Screen Description

#### 4.2.1 Start Screen

Upon starting, the UPS executes self-test. The initial screen displays and remains still in approximately 5 seconds as shown in Figure 4-2.

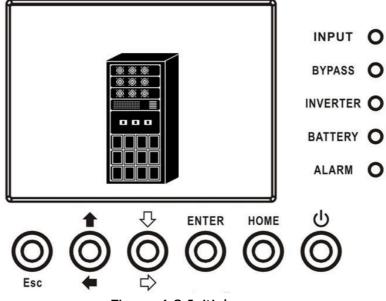

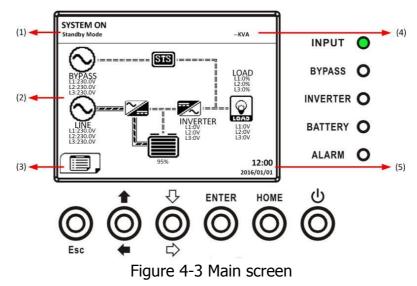

Figure 4-2 Initial screen

### 4.2.2 Main Screen

After initialization, the main screen will display as Figure 4-3. Main screen is divided into five parts.

- (1) UPS Mode: Current Operation Mode.
- (2) UPS Flow Chart: Current flow chart and measurement data.
- (3) Menu: Press ESC button to enter Menu screen.
- (4) UPS model name with power rating. If the power rating followed with (R), it means the UPS system is in redundant configuration.
- (5) Date and Time.

#### 4.2.3 MENU Screen

In the Main Screen, press ESC button to enter the **MENU** screen

Use UP and DOWN buttons to choose different menus, and Press ENTER to enter the sub screen, as shown in Figure 4-4 and 4-5.

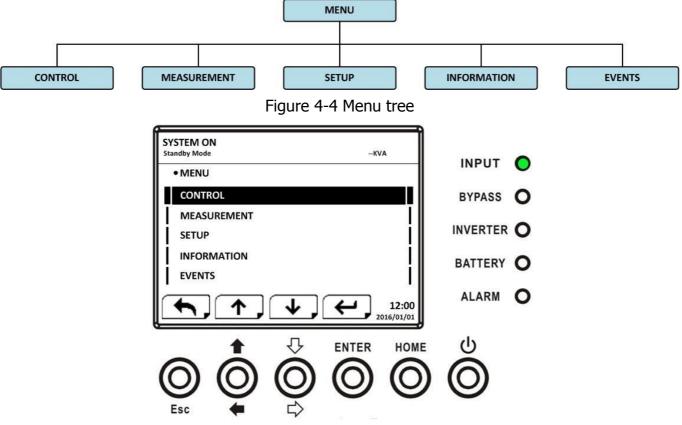

Figure 4-5 Menu screen

#### 4.2.4 Control Screen

Use UP and DOWN buttons to choose CONTROL option, and press ENTER button to enter the submenu, as shown in Figure 4-6, 4-7 and 4-8.

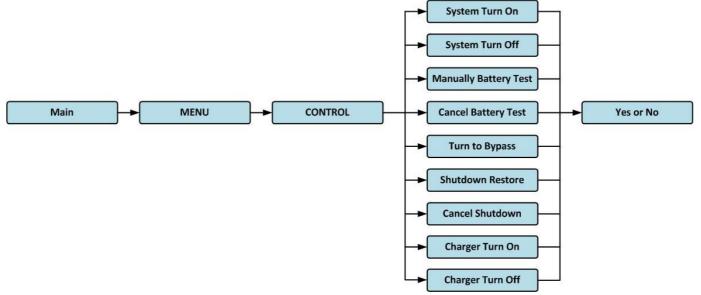

Figure 4-6 Control menu

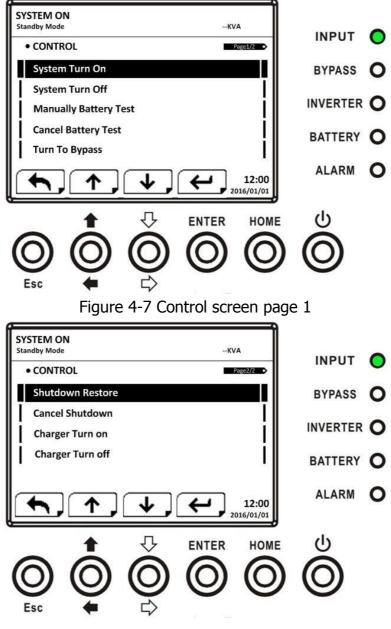

Figure 4-8 Control screen page 2

When the control option is selected by pressing ENTER button, the confirmation screen will pop up. Use LEFT and RIGHT buttons to choose YES or NO. Choose YES and press ENTER button to confirm command or choose NO to cancel command, as shown in Figure 4-9.

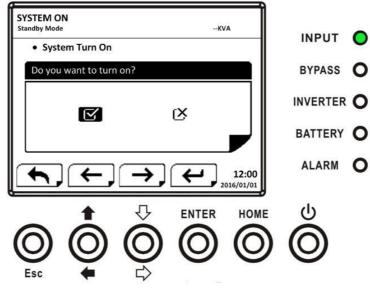

Figure 4-9 Confirmation screen

#### 4.2.5 Measurement Screen

Use UP and DOWN buttons to choose MEASUREMENT option, and press ENTER button to go into the submenu, as shown in Figure 4-10, 4-11.

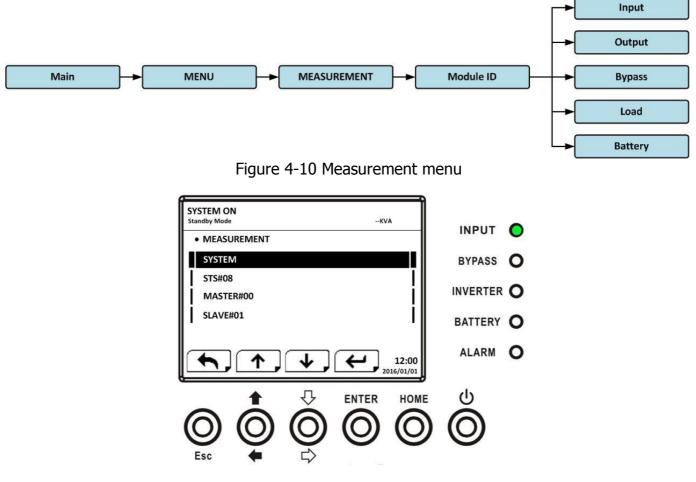

Figure 4-11 Measurement Menu Screen

Use UP and DOWN buttons to choose System, STS, Power Module option, and press ENTER button to go into the submenu, as shown in Figure 4-12.

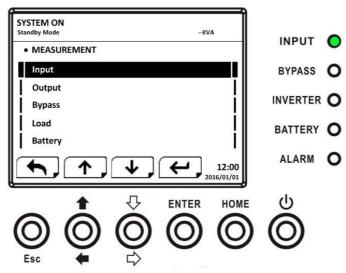

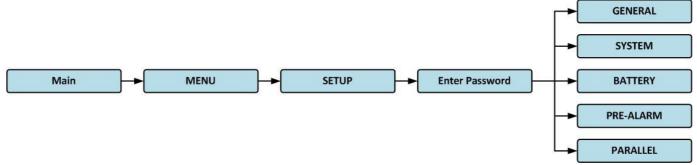

Figure 4-12 Measurement source selection Screen

Use UP and DOWN buttons to choose Input, Output, Bypass, Load, and Battery option, and press ENTER button to go into submenu. The measurement can be read as listed in **Table 4-4**. **Table 4-4**: Measurement data

Menu	Item	Explanation
Traverset	L-N Voltage (V)	Input phase voltage (L1, L2, L3). Units 0.1V.
Input	Frequency (Hz)	Input Frequency (L1, L2, L3). Units 0.1Hz.
	L-N Voltage (V)	Output phase voltage (L1, L2, L3). Units 0.1V.
	L-N Current (A)	Output phase current (L1, L2, L3). Units 0.1A.
Output	Frequency (Hz)	Output Frequency (L1, L2, L3). Units 0.1Hz.
	Power Factor	Output Power Factor (L1, L2, L3).
	L-N Voltage (V)	Bypass phase voltage (L1, L2, L3). Units 0.1V.
Bypass	Frequency (Hz)	Bypass Frequency (L1, L2, L3). Units 0.1Hz.
	Power Factor	Bypass Power Factor (L1, L2, L3).
	Sout (KVA)	Apparent power. Units 0.1KVA.
Load	Pout (KW)	Active power. Units 0.1KW.
	Load Level (%)	The percentage of the UPS rating load. Units 1%.
	Positive Voltage (V)	Battery Positive Voltage. Units 0.1V.
	Negative Voltage (V)	Battery Negative Voltage. Units 0.1V.
	Positive Current (A)	Battery Positive Current. Units 0.1A.
	Negative Current (A)	Battery Negative Current. Units 0.1A.
	Remain Time (Sec)	Battery run time remaining. Units 1sec.
	Capacity (%)	The percentage of the capacity of the battery. Units 1%.
	Test Result	Battery test result
	Charging Status	Battery charging status
Dotton	Temperature1(°C)	Battery cabinet temperature of STS. Units 0.1°C.
Battery		Battery cabinet temperature of extra communication
	Temperature2(°C)	card T1. Units 0.1°C.
	To man a wate was 2(%C)	Battery cabinet temperature of extra communication
	Temperature3(°C)	card T2. Units 0.1°C.
	Tomporature((°C)	Battery cabinet temperature of extra communication
	Temperature4(°C)	card T3. Units 0.1°C.
	Tomporaturo5(°C)	Battery cabinet temperature of extra communication
	Temperature5(°C)	card T4. Units 0.1°C.

#### 4.2.6 Setup Screen

Use UP and DOWN buttons to choose SETUP options. It's required to enter password to access General, SYSTEM, BATTERY, PRE-ALARM and PARALLEL (PARALLEL is reserved feature) sub-menus, as shown in Figure 4-13.

When the SETUP option is selected by pressing ENTER button, it will pop up a screen requesting to enter password will pop up, as shown in Figure 4-14.

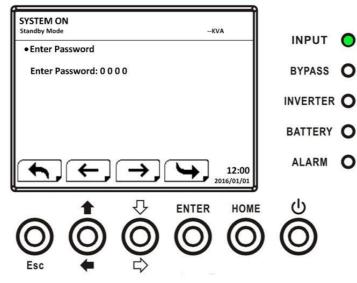

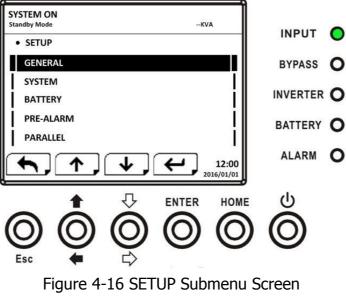

Figure 4-14 Enter password Screen

It's required to enter 4-digit password to enter SETUP submenu. If incorrect password is entered, the LCD screen will ask for re-entery.

If correct password is entered, the LCD will enter the SETUP submenu, as shown in Figure 4-16.

There are two levels of password protection, user password and maintainer password.

The default password for user is "0000". It could be change by user.

The manitainer password is owned by service personnel.

Entering different level of password can access to different settings. The setting can be changed in different operation mode. **Table 4-5** lists the relevant information.

	UPS operation Mode	Standby Mode	Bypass Mode	Line Mode	Е	Battery Test Mode	Fa Mc	Converter Mode	ECO Mode	Autho	rization

Parallel is reserved for future use.

## 4.2.6.1 Setup-General Screen

Use UP and DOWN buttons to choose between different sub-menus, and press ENTER button to go into the GENERAL setting screen, as shown in Figure 4-17, 4-18. General setting can be set in any operating mode and Setup-General setting list is shown in **Table 4-6**.

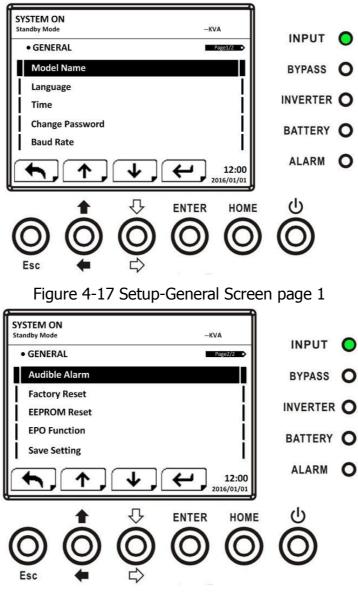

Figure 4-18 Setup-General Screen page 2

Use LEFT and RIGHT buttons to choose the setting options for setting requirement, then press ENTER. The confirmation screen will pop up, use LEFT and RIGHT buttons to choose YES or NO. Choose YES and press ENTER button to confirm setting or choose NO to cancel the setting, as shown in Figure 4-19.

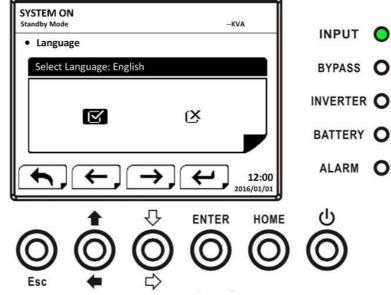

Figure 4-19 SETUP Confirmation screen

Table 4-6: Setup-General setting list

Setting Item	Sub Item	Explanation
Model Name		Set UPS Name (xxxxxxxxx).
		The max. length is 10 characters.
		Provides 3 optional LCD languages:
		<ul> <li>English (Default)</li> </ul>
Language		Traditional Chinese
		<ul> <li>Simplified Chinese</li> </ul>

#### 4.2.6.2 Setup-System Screen

Use UP and DOWN buttons to choose between different sub-menus, and press ENTER button to go into the SYSTEM setting screen, as shown in Figure 4-20, 4-21, 4-22.

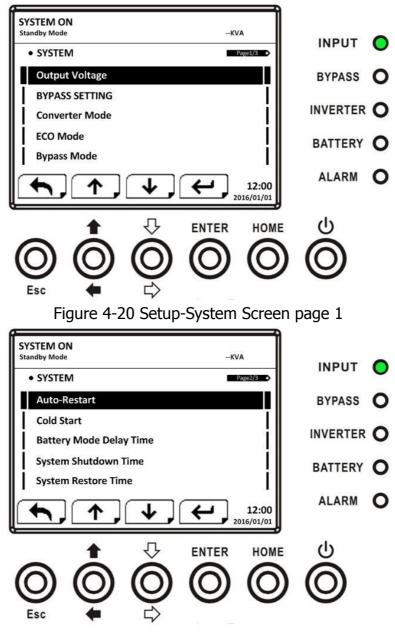

Figure 4-21 Setup-System Screen page 2

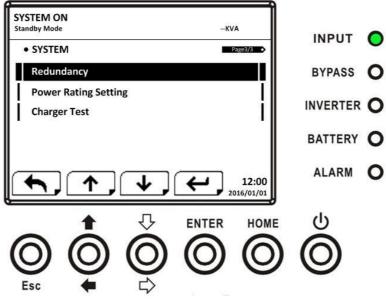

Figure 4-22 Setup-System Screen page 3

System setting can be set only when UPS is operating in certain mode. Please check available setting item in **Table 4-5** for the details. If it's not set up in specific mode, the warning screen will appear, as shown in Figure 4-23.

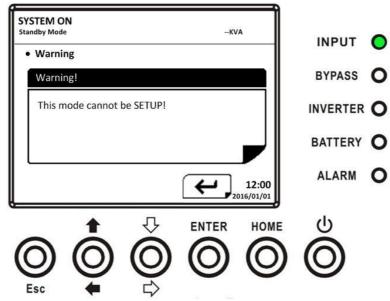

Figure 4-23 Warning screen

Setup-System setting list is shown in **Table 4-8**. **Table 4-8**: Setup-System setting list

Setting Item	Sub Item	Explanation
Output Voltage		Set output voltage <ul> <li>220Vac (Default)</li> <li>230Vac</li> <li>240Vac</li> </ul> MUST be reviewed after UPS installation
BYPASS SETTING	Bypass Voltage Range	Set bypass voltage range: Upper limit • +10% • +15% (Default) • +20%

		Lauran Basti
		Lower limit
		• -10%
		• -20% (Default)
		• -30%
		Set bypass Frequency range:
	Bunace Frequency	Upper/ Lower limit
	Bypass Frequency	• +/- 1Hz
	Range	• +/- 2Hz
		• +/- 4Hz (Default)
<b>a</b> .		Set converter mode
Converter		• Disable (Default)
Mode		• Enable
		Set ECO mode
ECO Mode		<ul> <li>Disable (Default)</li> </ul>
LCO MOUE		<ul> <li>Enable</li> </ul>
		Set bypass mode
Dura		Disable (Default)
Bypass		• Enable
Mode		MUST be reviewed after UPS installation.
		If you need the Bypass power when UPS is OFF, please
		enable it.
		Set auto-restart
		• Disable
Auto-Restart		<ul> <li>Enable (Default)</li> </ul>
AULO-RESIAL		After "Enable" is set, once UPS shutdown occurs due to
		low battery and then utility restores, the UPS will return
		to line mode.
		Set cold start
		• Disable
		<ul> <li>Enable (Default)</li> </ul>
Cold Start		After "Enable" is set, the UPS can be turned on without
		connecting to utility by pressing Battery Start Button.
		Refer to cold start operation for the details.
		•
		Set system shutdown delay time in battery mode
Battery		$(0 \sim 9990 \text{sec}).$
, Mode Delay		• 0: Disable (Default)
Time		• Not 0: Enable
		When this feature is enabled, UPS will shut off output
		after UPS operates in Battery mode for certain seconds.
System		Set system shutdown time (0.2~99min)
Shutdown		• 0.2 min (Default)
Time		This delay time will start counting when the
		CONTROL-Shutdown Restore command is executed.
		Set system restore time (0~9999min)
System Restore Time		• 1 min (Default)
		This delay time will start counting after shutdown time is
		elapsed when the CONTROL-Shutdown Restore
-		command is executed.
<b>-</b>		Set total power and redundancy
Redundancy		Total Power: the QTY of Power Modules
requireditcy		Redundancy: the QTY of redundant power module

	MUST be set after UPS installation or the QTY of Power Module is changed
Power Rating Setting	<ul> <li>Set Power Module Rating</li> <li>20KVA</li> <li>30KVA (Default)</li> <li>The 30K cabinet can be inserted with all 20KVA power modules. For this kind of application, the Power Rating has to be set to 20KVA.</li> <li>If setting is not corresponding to power capacity of power module, it will show error message.</li> <li>MUST be reviewed after UPS installation</li> </ul>
Charger Test	 <ul><li>Set charger test</li><li>Disable (Default)</li><li>Enable</li></ul>

### 4.2.6.3 Setup-Battery Screen

Use UP and DOWN buttons to switch different sub-menus. Press ENTER button to go into the BATTERY setting screen, as shown in Figure 4-24, 4-25.

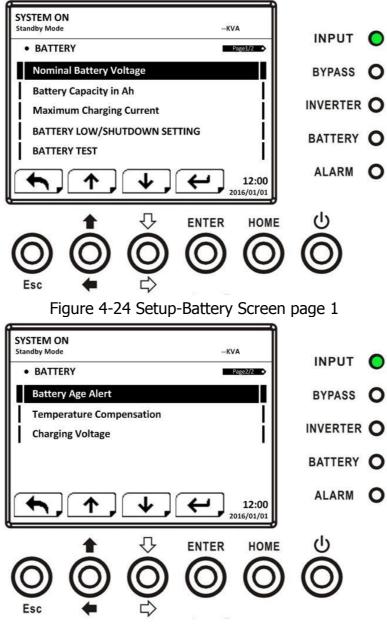

Figure 4-25 Setup-Battery Screen page 2

Battery setting can be set only when UPS is operating in standby mode. If it's not in standby mode, the warning screen will appear as shown in Figure 4-23. See Setup-Battery setting list in **Table 4-9**.

Table 4-9:	Setup-Battery	setting list
------------	---------------	--------------

Setting Item	Sub Item	Explanation
Nominal Battery Voltage		<ul> <li>Set battery nominal voltage</li> <li>16x12V (Default)</li> <li>18x12V</li> <li>20x12V</li> <li>MUST be set after UPS installation</li> </ul>
Battery Capacity in Ah		<ul> <li>Set battery capacity. (0~999)</li> <li>9Ah (Default)</li> <li>MUST be set after UPS installation or Battery capacity is changed.</li> </ul>
Maximum Charging Current		<ul> <li>Set battery maximum charging current (1~128A)</li> <li>2A (Default)</li> <li>MUST be set after UPS installation or Battery capacity is changed.</li> </ul>
Battery Low/ Shutdown	Battery Low Voltage Battery Low Capacity	Set battery low voltage (10.5~11.5V)x(battery Number) ● 11V x Battery Number (Default) Set battery low capacity (20~50%) ● 20% (Default)
SETTING	Battery Shutdown Voltage	Set battery voltage point for system shutdown in battery mode (10.0~11V) x (battery Number) ● 10V x Battery Number (Default)
	Periodic Battery Test	<ul> <li>Set periodic battery test disable or enable</li> <li>Disable (Default)</li> <li>Enable</li> </ul>
	Battery Test Interval	Set battery test interval (7~99 Days) ● 30 Days (Default)
BATTERY TEST	Stop by Time	<ul> <li>Set testing time for battery test (10~1000sec)</li> <li>10 sec (Default)</li> </ul>
	Stop by Battery Voltage	Set stop battery voltage in battery test (11~12V) x (battery Number) • 11V x Battery Number (Default)
	Stop by Battery Capacity	Set battery capacity to stop battery-testing. (20~50%) ● 20% (Default)
Battery Age Alert	Battery Age Alert (Months)	<ul> <li>Set battery age for replacement. (Disable,12~60Months)</li> <li>Disable (Default)</li> <li>If this feature is enabled and the battery has been installed over this period, there is a warning "Battery Age Alert" to indicate it.</li> </ul>
Temperature Compensation		Set battery temperature compensation. (0~-5 (mV/°C /cl)) ● 0(mV/°C/cl) (Default)
Charging Voltage		<ul> <li>Set battery charging voltage. (2.30~2.35V)</li> <li>2.35V (Default)</li> <li>Set battery float voltage. (2.23~2.35V)</li> <li>2.29V (Default)</li> </ul>

# 4.2.6.4 Pre-Alarm Screen

Use UP and DOWN buttons to switch different sub-menus. Press ENTER button to go into the Pre-Alarm setting screen, as shown in Figure 4-26.

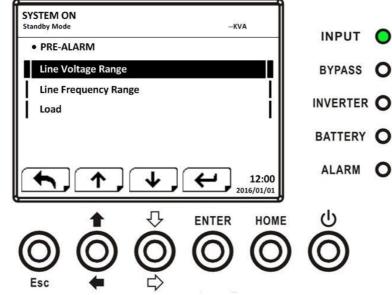

Figure 4-26 Setup-Pre-Alarm screen

Pre-Alarm setting can be set in any operation mode. See Setup-Pre-Alarm setting list in **Table 4-10**.

Table 4-10: Setup-Pre-Alarm setting list

Setting Item	Sub Item	Explanation	
Line Voltage Range		Set line voltage range: Upper limit • +5% • +10% • +15% • +20% (Default) Lower limit • -5% • -10% • -15% • -20% (Default)	
Line Frequency Range		Set line frequency range: Upper / Lower limit +/- 1Hz +/- 2Hz +/- 3Hz +/- 4Hz (Default)	
Load		Set UPS Overload percentage (40~100%) • 100% (Default) Set UPS load unbalance percentage (20~100%) • 100% (Default)	

#### 4.2.6.5 Setup-Parallel Screen (Reserved feature for future use)

Use UP and DOWN buttons to switch between different sub-menus. Press ENTER button to go into the PARALLEL setting screen, as shown in Figure 4-27.

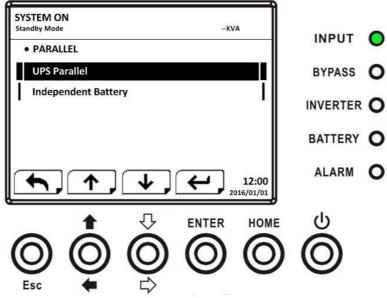

Figure 4-27 Setup-Parallel screen

See Setup-Parallel setting list in **Table 4-11**.

# 🚹 Warning

- The warning "Warning! Parallel Firmware Error" will appear in current event when the parallel setting is enabled, but the firmware does not support this feature.
- To release this warning, turn off the AC power source and shut down the system. After the system shutdown completely, turn on the AC power to restart the UPS.

## Table 4-11: Setup-Parallel setting list

Setting Item	Sub Item	Explanation
UPS Parallel		<ul><li>Set UPS parallel</li><li>Disable (Default)</li><li>Enable</li></ul>
Independent Battery		<ul><li>Set Independent Battery</li><li>Disable (Default)</li><li>Enable</li></ul>

## 4.2.7 Information Screen

In INFORMATION menu, you can check the serial number, firmware versions, system configuration and settings of the UPS. There are submenus under the INFORMATION, including Identification, System and Battery, as shown in Figure 4-28, 4-29.

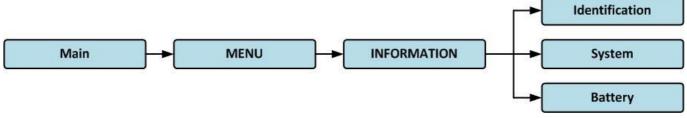

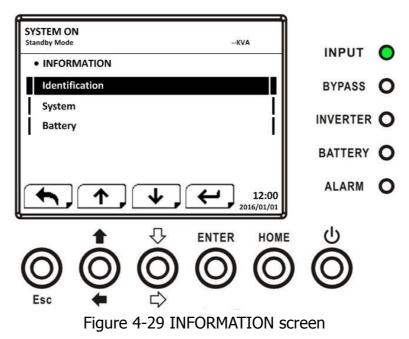

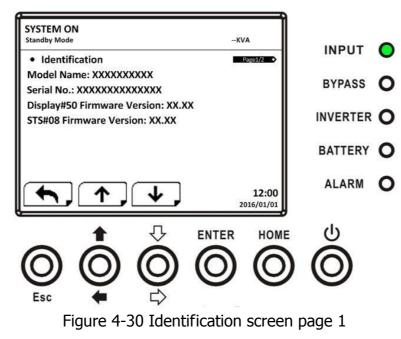

Figure 4-28 Information menu

#### 4.2.7.1 INFORMATION - Identification Screen

When Identification submenu is selected, the Model Name, Serial No. and Firmware Version will be displayed, as shown in Figure 4-30, 4-31. Use UP and DOWN buttons to switch between different pages.

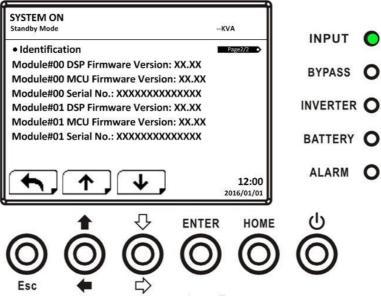

Figure 4-31 Identification screen page 2

### 4.2.7.2 INFORMATION - System Screen

When System submenu is selected, the system power, nominal voltage, nominal frequency ... etc. information will be displayed, as shown in Figure 4-32, 4-33, 4-34. Use UP and DOWN buttons to switch between different pages.

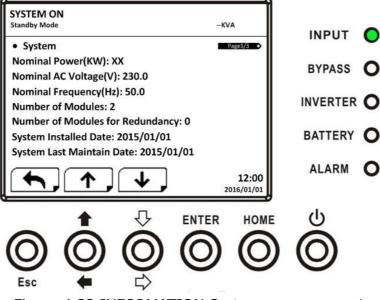

Figure 4-32 INFORMATION System screen page 1

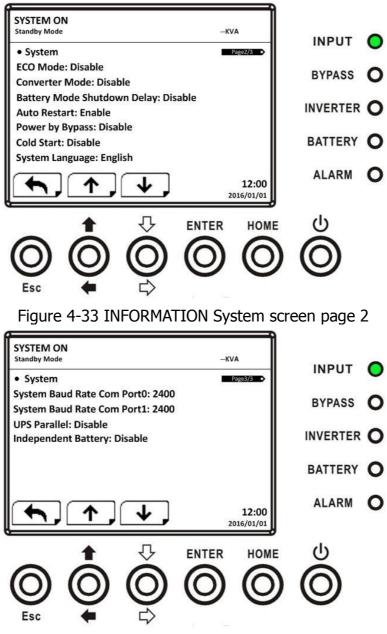

Figure 4-34 INFORMATION System screen page 3

# 4.2.7.3 INFORMATION - Battery Screen

When Battery submenu is selected, the Battery nominal voltage, capacity, charging current ... etc. information will be displayed, as shown in Figure 4-35, 4-36. Use UP and DOWN buttons to switch between different pages.

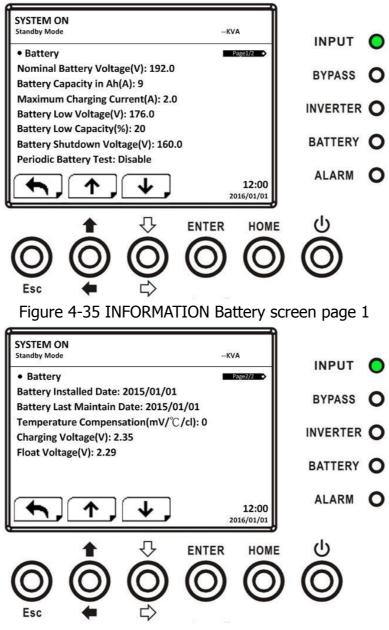

Figure 4-36 INFORMATION Battery screen page 2

## 4.2.8 Events Screen

In EVENT menu, you can check the current events, history events and reset all events, as shown in Figure 4-37, 4-38.

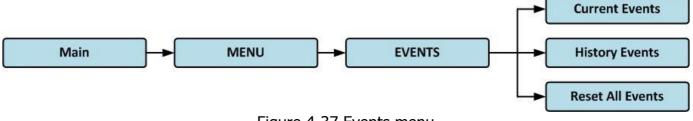

Figure 4-37 Events menu

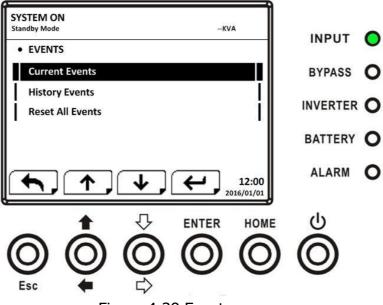

Figure 4-38 Events screen

When event occurs, you will see flashing warning text in the Main Screen as shown in Figure 4-39.

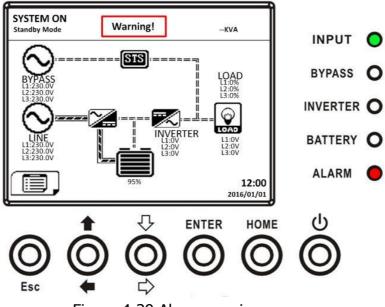

Figure 4-39 Alarm warning screen

#### 4.2.8.1 Current Events

When event occurs, it will display Module ID and alarm code in Current Events screen. It can save up to 50 events in current list. Only 4 events can be listed in one page. Therefore, if it exceeds more than four, you have to press UP or DOWN button to read other events as shown in Figure 4-40.

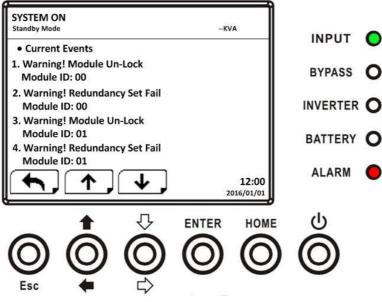

Figure 4-40 Current Events screen

#### 4.2.8.2 History Events

The detailed event information is saved in history events. It can save up to 500 events in history events. When warning occurs, it will display alarm code, alarm time and Module ID. When fault event occurs, it will display alarm code, alarm time, Module ID and data 1~2. (Refer to **Table 4-12** Alarm List) In order to record more historical information about the UPS system, the important setting changed (refer to **Table 4-13** Important setting changed), UPS operation mode changes (refer to **Table 4-14** UPS mode change) and control action executes (refer to **Table 4-15** Control execution) will be saved in History Events. Refer to Figure 4-41 for display screen.

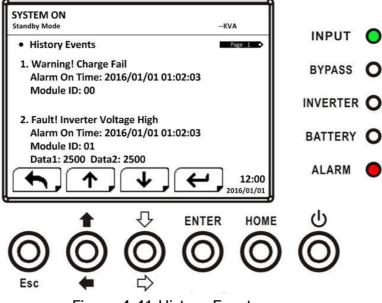

Figure 4-41 History Events screen

#### 1.2.8.3 Reset All Events

The Maintainer password is required to enter Reset All Events screen as shown in Figure 4-42. Then, use LEFT and RIGHT buttons to choose YES or NO. Choose YES and press ENTER button to reset all events or choose NO to cancel this action as shown in Figure 4-43.

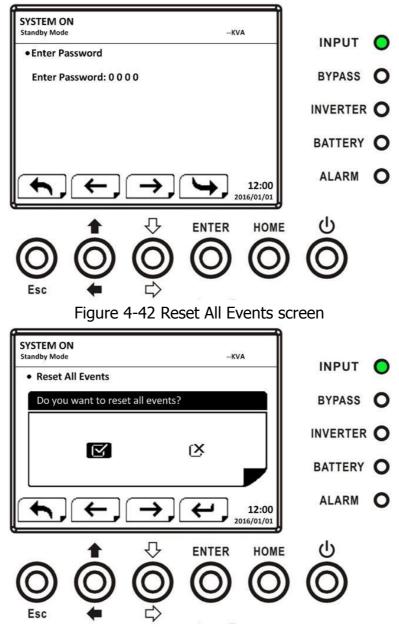

Figure 4-43 Reset All Events Confirmation screen

# 4.3 Alarm List

In **Table 4-12**, it provides the complete list of UPS alarm messages.

Table 4-12: Alarm List

Representation in display LCD	Explanation
Fault! Bus Over Voltage	DC bus voltage is too high
Fault! Bus Under Voltage	DC bus voltage is too low
Fault! Bus Voltage Unbalance	DC bus voltage is not balanced
Fault! Bus Short	DC bus is short
Fault! Bus Soft Start Time Out	The rectifiers can't start due to low DC bus voltage
Fault: bus soft start fille out	within specified duration
Fault! Inverter Soft Start Time Out	Inverter bus voltage cannot reach desired voltage within
Tault: Inverter Soft Start Time Out	specified duration
Fault! Inverter Voltage Over	Inverter Voltage is over Peak Value.
Fault! Inverter Voltage High	Inverter Voltage is too high
Fault! Inverter Voltage Low	Inverter Voltage is too Low
Fault! R Inverter Voltage Short	R phase inverter Output is short-circuited.
Fault! S Inverter Voltage Short	S phase inverter Output is short-circuited.
Fault! T Inverter Voltage Short	T phase inverter Output is short-circuited.
Fault! RS Inverter Voltage Short	R-S inverter Output is short-circuited.
Fault! ST Inverter Voltage Short	S-T inverter Output is short-circuited.
Fault! TR Inverter Voltage Short	T-R inverter Output is short-circuited.
Fault! Inverter R Negative Power	R phase inverter Output Negative Power over range
Fault! Inverter S Negative Power	S phase inverter Output Negative Power over range
Fault! Inverter T Negative Power	T phase inverter Output Negative Power over range
Fault! Over Load Fault	Heavy overload causes UPS fault.
Fault! Battery Fault	Batteries reversed
Fault! Over Temperature	Make sure adequate space is allowed for air ventilation and the fan is working
Fault! CAN Fault	CAN communication fault
Fault! TRIG0 Fault	Synchronized trigger signal fault
Fault! Relay Fault	Inverter relay fault
Fault! Line SCR Fail	Line SCR short circuit fault
Fault! EEPROM Fault	EEPROM operation error
Fault! Parallel Cable Loosen Fault	As stated.
Fault! DSP MCU Stop Communicate	As stated.
Fault! Bypass Temperature Fault	As stated
Fault! Bypass SCR Fault	As stated.
Line Fail	Utility lost or abnormal
Line Restore	Utility recovered to normal
Warning! EPO Active	Check the EPO connector

	The load devices are demanding more power than the
Warning! Over Load Fail	UPS can supply. Line mode will transfer to Bypass
	mode.
Warning! Communicate CAN Fail	CAN communication error
Warning Over Load	In Line mode, the load devices are demanding more
Warning! Over Load	power than the UPS can supply.
Warning! Battery Open	Battery not connected
Warning! Battery voltage High	Battery voltage is too High
Warning! Module Un-Lock	As stated.
Warning! Turn On Abnormal	As stated.
Warning! Charge Fail	As stated.
Warning! EEPROM Fail	EEPROM operation error
Warning! Fan Lock	As stated.
Warning! Line Phase Error	As stated.
Warning! Bypass Phase Error	As stated.
Warning! N Loss	Neutral loss
Warning! Internal Initial Fail	As stated.
Warning! Comm Syn Signal Fail	Communicate Synchronization Signal Fail
Warning! Comm. TRIG0 Fail	Communicate Trigger signal fault
Warning! Redundancy Set Fail	As stated.
Warning! Parallel Sys Config. Wrong	Parallel System Configure error
Warning! Maintenance Bypass	Enter maintenance
Warning! Battery Age Alert	Battery Life expiration
Warning! Parallel Rack Cable Loosen	As stated.
Warning! Parallel Rack Config. Wrong	Parallel Rack Configure error
Warning! Parallel Firmware Error	Power module parallel firmware error
Warning! Battery Voltage Low	Battery voltage is too low.
Warning! ID Conflict	Power module ID conflict.
Pre-Alarm! Line Voltage Fail	Line voltage over range
Pre-Alarm! Line Voltage Normal	Line voltage recovered to normal
Pre-Alarm! Line Frequency Unstable	Line frequency over range
Pre-Alarm! Line Frequency Normal	Line frequency recovered to normal
Pre-Alarm! Over Load	Output Load over range
Pre-Alarm! Load Normal	Output Load recovered to normal
Pre-Alarm! Load Unbalance	Output Load unbalance

# **5. Interface and Communication**

As shown in figure 5-1, there are dry contact Port (X1~X2), communication port (RS232/USB), SNMP Card slot and Extra Comm. card slot at the front panel.

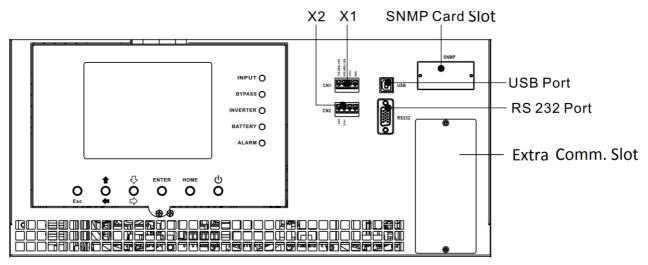

Figure 5-1 Dry contact ports and communication ports

Dry Contact No.	Function
X1	Battery Cabinet Temperature Detection Port- reserved function
X2	Remote EPO input port

# 5.1 X1-Battery Cabinet Temperature Detection Port

The UPS has battery cabinet temperature detection function. UPS can receive battery cabinet temperature through the external battery cabinet temperature detection board. Communication between the UPS and Battery temperature detection board was via I2C communication protocol. X1 is the battery cabinet temperature detection port. The port is shown in Figure 5-2 and described in Table 5-1.

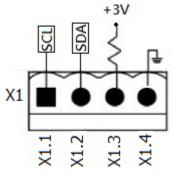

Figure 5-2 Battery Cabinet Temperature Detection Port

Name	Position	Description
SCL	X1.1	I <sup>2</sup> C communication SCL Signal
SDA	X1.2	I <sup>2</sup> C communication SDA Signal
+3.0V	X1.3	3V
Power GND	X1.4	GND

# 5.2 X2-Remote EPO Input Port

The UPS has an Emergency Power off (EPO) Function that can be operated by a remote contact assigned by the user. Users can set the logic (N.C or N.O) of this EPO Function through LCD panel.

X2 is the remote EPO input port. The port is shown in Figure 5-3 and described in Table 5-2.

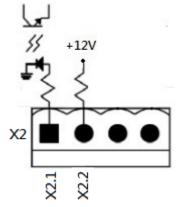

Figure 5-3 Remote EPO input port

Table 5-2 Description of remote EPO port

EPO Logic Setting	Position	Description
N.C	X2.1 & X2.2	EPO activated when Opened X2.1 & X2.2
N.O	X2.1 & X2.2	EPO activated when Shorted X2.1 & X2.2

If EPO Logic setting is Normal Closed (N.C), EPO is triggered when pins 1 and 2 of X1 are opened. Otherwise, EPO Logic setting is Normal Opened (N.O). EPO is triggered when pins 1 and 2 of X2 are closed.

#### Note:

1. EPO action shuts down the rectifiers, inverters and static transfer switch. But it does not internally disconnect the input power supply.

2. The default setting of the EPO function logic is Normal Opened (N.O).

# **5.3 Other Communication Interface**

## 5.3.1 Extra Comm. Slot

There is an optional card, **Extra Comm. Card** which can be inserted into this slot. This option can enhance the communication capability of the modular UPS. It provides an additional SNMP Slot, Dry contact I/P & O/P signals and temperature sensors ports.

#### 5.3.2 Local Communication Ports – RS232 & USB

**Note**: The RS232 and USB ports can't work simultaneously.

#### 5.3.3 SNMP Slot

The SNMP card or AS400 card can be inserted into this slot to work with the UPS.

# 6. Troubleshooting

Most of the Fault and Warning need to be released by authorized service personnel. Few of them can be solved by users themselves.

LCD Message	Explanation	Solution
Fault! Bus Over Voltage	DC bus voltage is too high	Contact service personnel.
Fault! Bus Under Voltage	DC bus voltage is too low	Contact service personnel.
Fault! Bus Voltage Unbalance	DC bus voltage is not balanced	Contact service personnel.
Fault! Bus Short	DC bus is short	Contact service personnel.
Fault! Bus Soft Start Time	The rectifiers could not start due to low	Turn off UPS and then restart the UPS.
Out	DC bus voltage within specified duration	If it fails again, contact service personnel.
Fault! Inverter Soft Start	Inverter voltage cannot reach desired	Turn off UPS and then restart the UPS.
Time Out	voltage within specified duration	If it fails again, contact service personnel.
Fault! Inverter Voltage Over	Inverter Voltage over (Peak Value)	Contact service personnel.
Fault! Inverter Voltage High	Inverter Voltage is too high	Contact service personnel.
Fault! Inverter Voltage Low	Inverter Voltage is too Low	Contact service personnel.
Fault! R Inverter Voltage Short	R phase inverter Output is shorted	Contact service personnel.
Fault! S Inverter Voltage Short	S phase inverter Output is shorted	Contact service personnel.
Fault! T Inverter Voltage Short	T phase inverter Output is shorted	Contact service personnel.
Fault! RS Inverter Voltage Short	R-S inverter Output is shorted	Contact service personnel.
Fault! ST Inverter Voltage Short	S-T inverter Output is shorted	Contact service personnel.
Fault! TR Inverter Voltage Short	T-R inverter Output is shorted	Contact service personnel.
Fault! Inverter R Negative Power	R phase inverter Output Negative Power over range	Contact service personnel.
Fault! Inverter S Negative Power	S phase inverter Output Negative Power over range	Contact service personnel.
Fault! Inverter T Negative Power	T phase inverter Output Negative Power over range	Contact service personnel.
Fault! Over Load Fault	Heavy overload causes UPS fault.	Reduce some load.
Fault! Battery Fault	Battery reverse	Check the polarity of battery connection and contact service personnel.
Fault! Over Temperature Make sure adequate space is allowed for air vents and the fan is working		Check if the ambient temperature is over specification. Or contact service personnel.
Fault! CAN Fault	CAN communication fault	Contact service personnel.
Fault! TRIG0 Fault	Synchronized trigger signal fault	Contact service personnel.
Fault! Relay Fault	Inverter relay fault	Contact service personnel.
Fault! Line SCR Fail	Line SCR short circuit fault	Contact service personnel.
Fault! EEPROM Fault	EEPROM operation error	Contact service personnel.
Fault! Parallel Cable Loosen Fault	As stated.	Check if the parallel cable is loose and contact service personnel.

Communicate         As stated         Check if the ambient temperature is over specification. Or contact service personnel. # 7. Service

This chapter introduces how to replace the power module.

### Warning:

- 1. Only the customer service engineers can do this service.
- 2. Remove the power modules from top to bottom, so as to prevent cabinet from toppling due to high center of gravity.

# 7.1 Replacement Procedures Of Power Module

### Warning:

- Confirm UPS is in Line mode or Bypass mode.
- Confirm at least one Power Module remains in the UPS cabinet after one Power Module is removed
- If all power modules have to be removed, the replacement MUST be under Maintenance Bypass Operation Mode.
- 1. Turn ready switch to "
  position
- 2. The Power Module FAULT LED (RED) indicator is lit to indicate the Power Module output is off and disconnected from UPS system.
- 3. Use a screwdriver to remove the four screws from fixing holes.
- 4. Two people pull out together and remove the Power Module from its slot together.
- 5. After servicing the module, confirm that the DIP switch of the module is set correctly and the ready switch is in unready state "
- 6. Push the module into the cabinet and tighten the screws on both sides. If there are more than one power module to re-install, please wait 30-second before installing another module.
- 7. The re-installed Power Module will be turned on automatically when UPS is in line mode.

# 8. Specifications

The chapter states the specifications of UPS.

**8.1 Conformity and Standards** The UPS has been designed to conform to the European and international standards listed in Table 8-1.

Item	Normative reference		
Uninterruptible power systems (UPS) –Part 1:		IEC/EN62040-1	
General and safety requirements	for UPS		
Electromagnetic compatibility (EMC) requirements		IEC/EN62040-2	
for UPS			
Method of specifying the perform	ance and test	IEC/EN62040-3	
requirements of UPS			
Notes:			
ESD	IEC/EN 61000-4-2	Level 3	
RS	IEC/EN 61000-4-3	Level 3	
EFT	IEC/EN 61000-4-4	Level 3	
Surge	IEC/EN 61000-4-5	Level 3	
CS	IEC/EN 61000-4-6	Level 3	
Power-Frequency Magnetic field	IEC/EN 61000-4-8	Level 3	
Low Frequency Signals	IEC/EN 61000-2-2 Level 10V		
Conduction	IEC/EN62040-2 Ca	5 /	
Radiation	IEC/EN62040-2 Ca	tegory C3	

### 8.2 Environmental Characteristics

	<b>Table 8-2:</b>	Environmental	characteristics
--	-------------------	---------------	-----------------

Table 6-2: Environmental characteristics				
Item	Unit	Specifications		
Noise within 1 m	dB	Max. 68.2		
Altitude	m	$\leq$ 1000, derate power by 1% per 100m between 1000m and 2000m		
Relative humidity	% RH	0 ~ 95, non-condensing		
Operating temperature	°C	0 ~ 40°C		
		(Output capacity will be derated when temperature is over		
		30°C. It will be derated to 90% at 35°C and 80% at 40°C.		
Storage and	°C	-15 ~ 60		
transportation				
temperature for UPS				

### 8.3 Mechanical Characteristics

Table 8-3:	Mechanical	characteristics	

Model		E-90HV-L/E-60-20KHV-L	E-90HV/E-60-20KHV
Rated power (kVA)	Unit	90/60	90/60
Dimensions, W x D x H	mm	515x1000x1420	515x1000x763
Weight	kg	150	77
Color	N/A	Black	
Protection degree, IEC (60529)	N/A	IP20	

# **8.4 Electrical Characteristics (Input Rectifier) Table 8-4:** Rectifier AC input (mains)

Rated power (kVA)	Unit	20K ~ 60	30 ~ 90	
Rated AC input voltage	Vac	380/400/415 (3-phase and sharing neutral with the bypass input)		
		· · · · · · · · · · · · · · · · · · ·		
Input voltage tolerance	Vac	305 ~ 478; 304 ~ 208	8 (output derated	
		below 70%)		
Frequency	Hz	50/60 (tolerance: 40H	z ~ 70Hz)	
Power factor	kW/kVA	0.99 (0.98) full load(h	alf load)	
Harmonic current distortion	THDI%	<3 (full load)		

### 8.5 Electrical Characteristics (Intermediate DC Circuit)

Table 8-5: Battery						
Intermediate DC circu	uit					
Model		E-90HV-L	E-60-20KHV-L	E-90HV	E-60-20KHV	
Rated power (kVA)	Unit	90 60 90 60				
Number of lead-acid	Nominal	216 (6cells x 36 12V battery block)				
cells	Maximum	24	40 (6cells x 40 12	2V battery bloc	k)	
	Minimum	19	92 (6cells x 32 12	2V battery bloc	k)	
Float voltage	V/cell	2.3V/cell				
		Constant curre	nt and constant	voltage charge	mode	
Temperature	mV/ /cl	-3.0 (Option)				
compensation						
Ripple voltage	% V float	≤1				
Ripple current	% C10	≤5				
Boost voltage	VRLA	2.35V/cell				
		Constant current and constant voltage charge mode				
EOD voltage	V/cell	1.67V/cell				
Battery charge		Limit current and constant voltage charge mode				
	V/cell		Floating Voltage 2.3V/cell			
		Boost charging	2.35V/cell			
Battery charging		8 / ner 30K no	wer module (adji	ustable)		
power <sup>1</sup> max	A		wer module (adj			
current						
Note:						

1. At low input voltage the UPS recharging capability increases and load decreases (up to the maximum capacity indicated).

# **8.6 Electrical Characteristics (Inverter Output) Table 8-6:** Inverter output (to critical load)

		i louu j		
Rated power (kVA)	Unit	20 ~ 60	30 ~ 90	
Rated AC voltage <sup>1</sup>	Vac	380/400/415 (three-phase four-wire, with neutral		
		reference to the bypass neutral)		
Frequency	Hz	50/60 Auto Selectable		
Overload	%	105%~110% for 60min		
		110%~125% for 10min		
		126%~150% for 1min		
		>150% for 200ms		
Neutral current capability	%	170%		
Steady state voltage stability	%	$\pm 1$ (balanced load), $\pm 2$ (100	0% unbalanced load)	
Total harmonic voltage	%	<2 (linear load), <4 (non-lir	near load3)	
Synchronization window		+/- 1Hz, +/- 2Hz, +/- 4Hz (	default: 4Hz)	
Note:				

1. Factory setting is 400V. 380 or 415V is selectable by commissioning engineer.

### 8.7 Electrical Characteristics (Bypass Mains Input)

 Table 8-7: Bypass mains input

Rated power (kVA)	Unit	20 ~ 60	30 ~ 90	
Rated AC voltage1		380/400/415 (Three-phase four-wire, sharing neutral with the rectifier input and providing neutral reference to the output)		
Rated current		60KW → 118, 380V / 113, 400V / 108.5, 415V 90KW → 171, 380V / 164, 400V / 157, 415V		
Overload		105%~110% for 60min 110%~125% for 10min 126%~150% for 1min >150% for 200ms		
Upstream protection, bypass line	-	Circuit breaker, rated up to 10 current.	00% of nominal output	
Current rating of neutral cable	А	1.7 × In		
Frequency	Hz	50/60 Auto Selectable		
Transfer time (between bypass and inverter)	ms	Synchronous transfer: ≤20ms	5	
Bypass voltage tolerance		Upper limit: +10, +15 or +20 Lower limit: -10, -20, -30 def (delay time to accept steady	ault: -20	
Frequency Range	Hz	+/- 1Hz, +/- 2Hz, +/- 4Hz (d	efault: 4Hz)	
Note:	on 415			

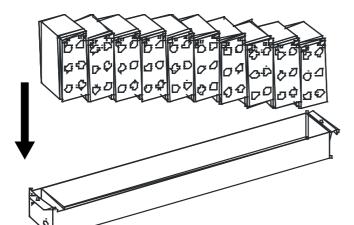

1. Factory setting is 400V. 380V or 415V is selected by commissioning engineer.

## **Appendix – Battery Cabinet Installation**

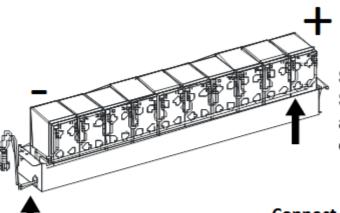

1. Assembly

STEP 1: Put the plastic box into the tray.

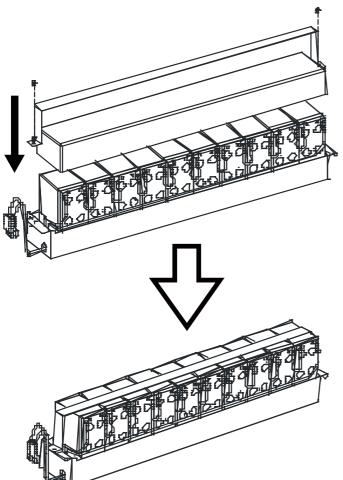

**STEP 2: Put the batteries into the plastic box.** 

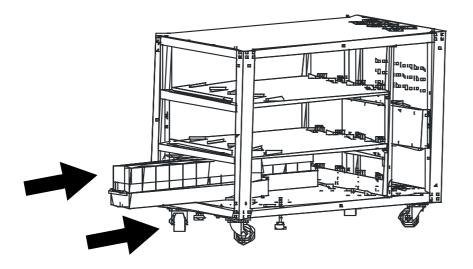

STEP 3: String the cables, and pull out the connector from the hole.

Warning:

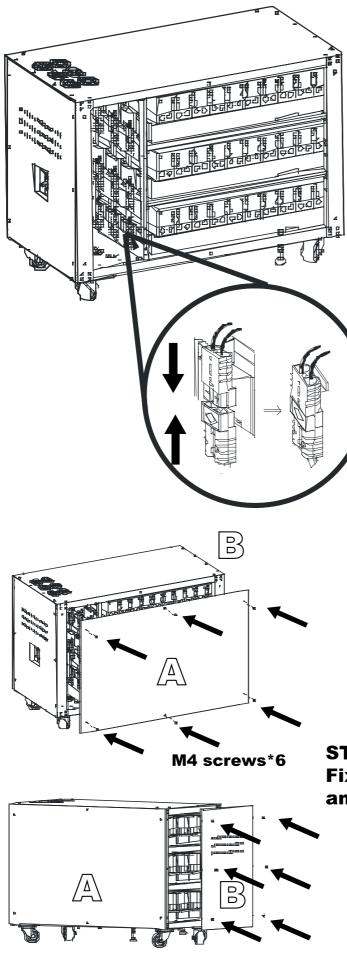

Connect the RED wire to the Battery (+) Connect the BLACK wire to the Battery (-)

STEP 4: Put the lid on the box and use holding bar to fix lid with the box and tighten the screws.

STEP 5: Put the battery set into the rack.

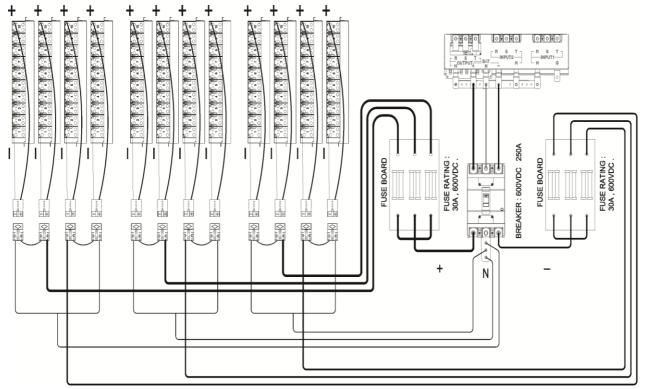

STEP 6: Link the upper external battery connecter with the lower one.

STEP 7: Fix lid A with six M4 screws, and lid B with six M4 screws.

M4 screws\*6

### 2. Internal Battery Wiring

### **DC±240V**

PPP.

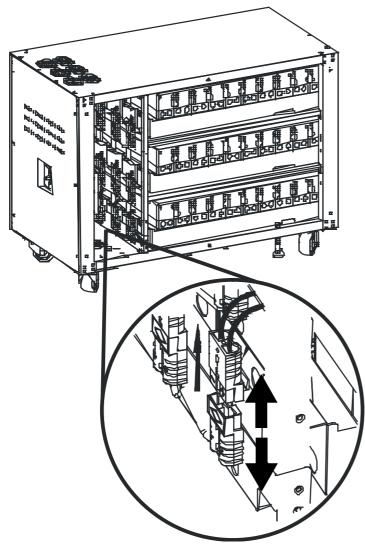

\* Ensure the UPS is properly grounded.

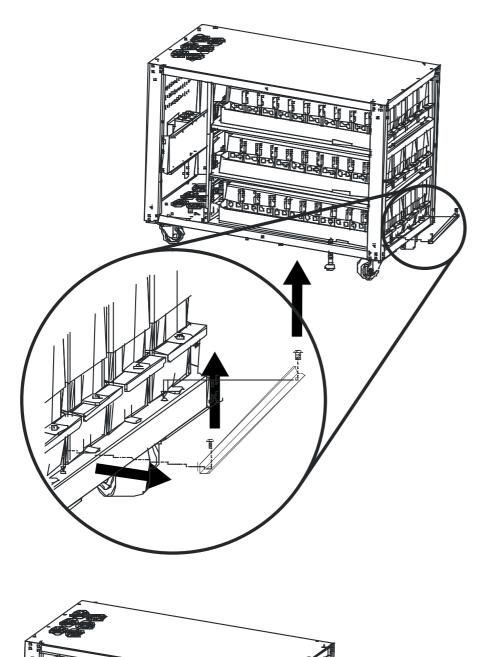

4. Battery Replacement

STEP 1: Loosen the screws and remove the lids- A&B

STEP 2: Disconnect the upper external connecter with the lower one.

**STEP 3:** Loosen the screws and remove frame.

**STEP 4: Pull out the battery set, and replace the batteries.**
