Frequency displays / tachometers with limits

LED tachometers

Dual frequency displays with 4 outputs and analog output (AC+DC)

Frequency display for demanding applications, with two individually scalable encoder inputs, in each case A, /A, B, /B for count frequencies up to 1 MHz per channel (also for single channel use).

Operating modes can be selected for tachometer or frequency display with measurements for difference, total value, product or ratio (also with reciprocal display).

Interface

Innovative

- 2 separate freely scalable frequency inputs: HTL or TTL (both also with inverted inputs), max. input frequency 1 MHz/channel.
- · Very bright LED display, 15 mm high (6 digits).
- · 4 freely programmable fast solid-state outputs, each with 350 mA output current.
- Many different output modes.
- Simple programming with function codes, dependent on the operating mode selected.
- With 9 fixed different frequency functions, e.g.:
 - Single, difference and total value measurement of both inputs.
 - Product and ratio measurement.
 - Percentage measurement.
 - In-process time calculated from frequency (reciprocal speed).

Compact and multifunctional

- Up to 3 display values in a single device: display counter 1, display counter 2 as well as the display calculated from counter 1 and 2.
- · AC and DC supply voltage in one device.
- Simple programming with 4 keys, all keys can be assigned dual programming functions.
- Can be used as a frequency display or tachometer with limit values.
- Monitoring function, where 2 values are monitored or calculated with respect to each other.
- · 4 fast programmable inputs with various functions such as start delay, key lockout, display memory, reference input or switching between the display values.
- Scalable analog output 0/4 ... 20 mA, +/-10 V or 0 ... 10 V.
- Standard interface RS232 for parameter setting, for reading out the values to a PC or PLC, for modifications during operation.
